Description

Articulated hauler A35 consists of two main sections, the tractor unit and the load unit. The two units are joined by the frame joint which allows movement about a vertical bearing for steering. The frame joint also allows the tractor unit and the load unit to twist in relation to each other along the horizontal axis.

The tractor unit consists of a six-cylinder diesel engine, transmission and dropbox as well as a drive axle. The cab is rubber-mounted on the frame. Springs are mounted between the frame and the drive axle.

The load unit consists of a frame, elevation load body, front and rear bogie drive axles which are linked by the bogie suspension.

The A35 articulated hauler has constant 4-wheel drive with the possibility to engage 6-wheel drive. It has a longitudinal differential lock in the dropbox and differential locks on all drive axles.
