Indicators 2012 is a compilation of relevant high quality and internationally comparable statistics about development and the quality of people's lives. Organized around six themes: world view, people, the environment, the economy, states and markets, and global links, it aims to put data into the hands of policy makers, development specialists, students, and the public. The full dataset used to produce World Development Indicators contains more than 1,000 indicators for 216 economies, with many time series extending back to 1960. And as a major part of the World Bank's open data initiative, the data are freely available for use and reuse under an open license. A companion printed volume, the little data book 2012, presents a selection of indicators for each economy, and the biennial statistics for small states presents data for less populated developing countries. Any assessment of the Millennium Development Goals must acknowledge that amid all the signs of progress, there are gaps. Some targets will not be reached in this decade or the next. Likewise, the statistical record is still incomplete. Continuing progress will require renewed commitment and careful monitoring.

Obesity Prevention Laurette Dube, 2010-06-25. Over the years, approaches to obesity prevention and treatment have gone from focusing on genetic and other biological factors to exploring a diversity of diets and individual behavior modification interventions anchored primarily in the power of the mind to the recent shift focusing on societal interventions to design temptation-proof physical, social, and economic environments. In spite of repeated calls to action, including those of the World Health Organization (WHO), the pandemic continues to progress. WHO recently projected that if the current lifestyle trend in young and adult populations around the world persists by 2012, in countries like the USA, health care costs may amount to as much as 17.7% of the GDP. Most importantly, in large part due to the problems of obesity, those children may be the first generation ever to have a shorter life expectancy than that of their parents. *Obesity Prevention* presents the most current research and proposals for addressing the pandemic. Past studies have focused primarily on either genetic or behavioral causes for obesity; however, today's research indicates that a strongly integrated program is the best prospect for success in overcoming obesity. Furthermore, focus on the role of society in establishing an affordable, accessible, and sustainable program for implementing these lifestyle changes is vital, particularly for those in economically challenged situations who are ultimately at the highest risk for obesity. Using studies from both neuroscience and behavioral science to present a comprehensive overview of the challenges and possible solutions, *The Brain to Society Approach to Obesity Prevention* focuses on what is needed in order to sustain a healthy, pleasurable, and affordable lifestyle. Explores the brain-to-society approach to obesity prevention, focusing on an integrative approach to addressing the obesity pandemic. Presents both the neuroscientific and the behavioral factors that

impact eating habits Identifies the challenges and suggests solutions for altering attitudes toward food on both an individual and a societal level **Health Services Reports** ,2001 Cities, Slums and Gender in the Global South Sylvia Chant,Cathy McIlwaine,2015-12-22 Developing regions are set to account for the vast majority of future urban growth and women and girls will become the majority inhabitants of these locations in the Global South This is one of the first books to detail the challenges facing poorer segments of the female population who commonly reside in slums It explores the variegated disadvantages of urban poverty and slum dwelling from a gender perspective This book revolves around conceptualisation of the gender urban slum interface which explains key elements to understanding women s experiences in slum environments It has a specific focus on the ways in which gender inequalities are can be entrenched but also alleviated Included is a review of the demographic factors which are increasingly making cities everywhere feminised spaces such as increased rural urban migration among women demographic ageing and rising proportions of female headed households in urban areas Discussions focus in particular on education paid and unpaid work access to land property and urban services violence intra urban mobility and political participation and representation This book will be of use to researchers and professionals concerned with gender and development urbanisation and rural urban migration Alcohol: No Ordinary Commodity Thomas F.
