## **The Mona Lisa Molecule:**

Math and the Mona Lisa Bulent Atalay, 2011-09-20 Leonardo da Vinci was one of history's true geniuses equally brilliant as an artist, scientist, and mathematician. Readers of *The Da Vinci Code* were given a glimpse of the mysterious connections between math, science, and Leonardo's art. *Math and the Mona Lisa* picks up where *The Da Vinci Code* left off, illuminating Leonardo's life and work to uncover connections that until now have been known only to scholars. Bulent Atalay, a distinguished scientist and artist, examines the science and mathematics that underlie Leonardo's work, paying special attention to the proportions, patterns, shapes, and symmetries that scientists and mathematicians have also identified in nature. Following Leonardo's own unique model, Atalay searches for the internal dynamics of art and science, revealing to us the deep unity of the two cultures. He provides a broad overview of the development of science from the dawn of civilization to today's quantum mechanics. From this base of information, Atalay offers a fascinating view into Leonardo's restless intellect and modus operandi, allowing us to see the source of his ideas and to appreciate his art from a new perspective. **Molecular**

**Robotics** Satoshi Murata, 2022-08-17 In this book, researchers at the forefront of the field explain the minimum necessary background knowledge and introduce important topics in molecular robotics in an easy-to-understand manner. Molecular robotics is related to many fields such as systems engineering, control engineering, computer science, biochemistry, biophysics, polymer chemistry, nucleic acid chemistry, molecular biology, and ethics. The whole picture of molecular robotics can be grasped only by looking at these fields from a bird's-eye view. This book has been planned in the belief that such a book is essential for students and those new to the field to understand the ongoing expansion of molecular robotics. The book consists of eight chapters: introduction, design theory of molecular robots, systemization technology, molecular nanotechnology, molecular actuators, molecular materials, medical applications, and social acceptance. In each chapter, the reader can get a general idea of the theory, underlying technology, medical applications, and social issues, and can also understand what is currently being done on the research front. In addition, there are many parts that introduce topics related to molecular robotics. Was Mona Lisa Created by Physicochemical Reactions Alone? Nickolas Dorfman, 2008-09 In this book, the author is trying to explain some unique phenomena of the Nature using scientific data, speculations, logic, and fantasy. The main point of this book is to show that mainstream science is going too deep into physics and chemistry, limiting science to only molecules and energy, and dismissing any spiritual ideas. A simple logic can clearly indicate that inanimate molecules and energy just cannot be so smart to create numerous masterpieces of human civilization. We should not ignore the fact that there is something very fundamental in the Universe that we still know nothing about. Short-sightedness of materialistic views will never let us approach the secret of human mind. We can discover millions of new genes and get knowledge of zillions of new biochemical reactions, but all these will never let us know how Mona Lisa was created or how inanimate molecules in human brain could build spacecrafts and send sophisticated robots into space to investigate the secrets of
