Mountain Environment Valerio Faraoni,2019-05-23 This unique volume applies physics and basic science to the mountain environment and is written in a non technical language for curious laypeople who wonder why or how natural phenomena happen and what their scientific explanation may be The book discusses physics in a non specialized way Alpine Physics is mostly organized in categories relevant for non scientists with an interest in alpine environments Intuitive decision making is often just grounded in plain common sense to which mountain and nature lovers relate easily especially when involving high stakes decisions based on the estimation of such a treacherous environment The book highlights how this intuitive decision making can be complemented and augmented by basic scientific knowledge and with better understanding it leads one to become a rational decision maker The book stimulates its readers to reason and discover why things are the way they are at high altitudes where many risk factors are aggravated often dramatically by steep gradients The writing style marries that of the conventional science textbook and that of the informal North American climbing guidebooks **The Athenaeum** ,1909
