Bedau,Carol E. Cleland,2018-11-22 Introduces a broad range of scientific and philosophical issues about life through the original historical and contemporary sources *Dazzle Gradually* Lynn Margulis,Dorion Sagan,2007-08-15 At the crossroads of philosophy and science the sometimes dry topics of evolution and ecology come alive in this new collection of essays many never before anthologized Learn how technology may be a sort of second nature how the systemic human fungus *Candida albicans* can lead to cravings for carrot cake and beer how the presence of life may be why there s water on Earth and many other fascinating facts The essay Metametazoa presents perspectives on biology in a philosophical context demonstrating how the intellectual librarian pornographer and political agitator Georges Bataille was influenced by Russian mineralogist Vladimir Vernadsky and how this led to his notion of the absence of meaning in the face of the sun which later influenced Jacques Derrida thereby establishing a causal chain of influence from the hard sciences to topics as abstract as deconstruction and post modernism In *Spirochetes Awake* the bizarre connection between syphilis and genius in the life of Friedrich Nietzsche is traced The astonishing similarities of the Acquired Immune Deficiency Syndrome symptoms with those of chronic spirochete infection it is argued contrast sharply with the lack of evidence that HIV is the cause of AIDS Throughout these readings we are dazzled by the intimacy and necessity of relationships between us and our other planetmates In our ignorance as civilized people we dismiss disdain and deny our kinship with the only productive life forms that sustain this living planet **The Common Review** ,2004 *A History of the Life Sciences, Revised and Expanded* Lois N. Topham,2022-10-12 A powerful reimagining of the world in which a young Charles Darwin developed his theory of evolution When Charles Darwin returned to Britain from the Beagle voyage in 1836 the most talked about scientific books of the day were the Bridgewater Treatises This series of eight works was funded by a bequest of the last Earl of Bridgewater and written by leading men of science appointed by the president of the Royal Society to explore the Power Wisdom and Goodness of God as manifested in the Creation Securing public attention beyond all expectations the series offered Darwin s generation a range of approaches to one of the great questions of the age how to incorporate the newly emerging disciplinary sciences into Britain s overwhelmingly Christian culture Drawing on a wealth of archival and published

sources including many unexplored by historians Jonathan R Topham examines how and to what extent the series contributed to a sense of congruence between Christianity and the sciences in the generation before the fabled Victorian conflict between science and religion Building on the distinctive insights of book history and paying close attention to the production circulation and use of the books Topham offers new perspectives on early Victorian science and the subject of science and religion as a whole

Shaping Science with Rhetoric Leah Ceccarelli,2010-11-15 How do scientists persuade colleagues from diverse fields to cross the disciplinary divide risking their careers in new interdisciplinary research programs Why do some attempts to inspire such research win widespread acclaim and support while others do not In *Shaping Science with Rhetoric* Leah Ceccarelli addresses such questions through close readings of three scientific monographs in their historical contexts Theodosius Dobzhansky's *Genetics and the Origin of Species* 1937 which inspired the modern synthesis of evolutionary biology Erwin Schrödinger's *What Is Life* 1944 which catalyzed the field of molecular biology and Edward O Wilson's *Consilience* 1998 a so far not entirely successful attempt to unite the social and biological sciences She examines the

rhetorical strategies used in each book and evaluates which worked best based on the reviews and scientific papers that followed in their wake Ceccarelli's work will be important for anyone interested in how interdisciplinary fields are formed from historians and rhetoricians of science to scientists themselves

The Nature of Order, Book One: The Phenomenon of Life Christopher Alexander, 2020-03-30 Christopher Alexander's series of ground breaking books including *A Pattern Language* and *The Timeless Way of Building* have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in *The Nature of Order* Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities In *The Phenomenon of Life* the first volume in this four volume masterwork Alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture With this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region He introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built Alexander argues that living structure is at once both personal and structural Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united
