The Onlife Manifesto Being Human In A Hyperconnected Era:

The Onlife Manifesto Luciano Floridi, 2014-11-16 What is the impact of information and communication technologies ICTs on the human condition In order to address this question in 2012 the European Commission organized a research project entitled The Onlife Initiative concept reengineering for rethinking societal concerns in the digital transition This volume collects the work of the Onlife Initiative It explores how the development and widespread use of ICTs have a radical impact on the human condition ICTs are not mere tools but rather social forces that are increasingly affecting our self conception who we are our mutual interactions how we socialise our conception of reality our metaphysics and our interactions with reality our agency In each case ICTs have a huge ethical legal and political significance yet one with which we have begun to come to terms only recently The impact exercised by ICTs is due to at least four major transformations the blurring of the distinction between reality and virtuality the blurring of the distinction between human machine and nature the reversal from information scarcity to information abundance and the shift from the primacy of stand alone things properties and binary relations to the primacy of interactions processes and networks Such transformations are testing the foundations of our conceptual frameworks Our current conceptual toolbox is no longer fitted to address new ICT related challenges This is not only a problem in itself It is also a risk because the lack of a clear understanding of our present time may easily lead to negative projections about the future The goal of The Manifesto and of the whole book that contextualises is therefore that of contributing to the update of our philosophy It is a constructive goal The book is meant to be a positive contribution to rethinking the philosophy on which policies are built in a hyperconnected world so that we may have a better chance of understanding our ICT related problems and solving them satisfactorily The Manifesto launches an open debate on the impacts of ICTs on public spaces politics and societal expectations toward policymaking in the Digital Agenda for Europe s remit More broadly it helps start a reflection on the way in which a hyperconnected world calls for rethinking the referential frameworks on which policies are built The Onlife Manifesto Luciano Floridi, 2014-12-31

Subjectivity Transformed Thomas Vesting, 2023-11-28 This book provides a historically informed reconstruction of the social practices that have shaped the formation of the modern subject from the early modern period to the present The formal legal protections accorded to subjects are and always have been latent in social practices norms and language before they are articulated in formal legal orders Vesting argues that in Western societies legal personhood is closely tied to three ideal types of social personhood what he calls the gentleman the manager and Homo digitalis By examining these three ideal types and their emergence in society we can see that Western formal law does not bring these ideal types into being but on the contrary they arise from the social and cultural conditions that they generate and reflect Correspondingly Western legal personhood or legal subjectivity arises from the history and culture of Western nations not the other way around Therefore signature features of Western formal law particularly its valorization of the rights of persons whether natural or nonnatural

come from the particular sociohistorical cultural developments that had already generated the strong ideas of social personhood inherent in the ideal types of the gentleman the manager and Homo digitalis Subjectivity Transformed is a major contribution to legal and social theory and with its original analysis of the formation of modern subjectivity it will be of interest to students and scholars throughout the social sciences and humanities **After the Digital Tornado** Kevin Werbach, 2020-07-23 Networks powered by algorithms are pervasive Major contemporary technology trends Internet of Things Big Data Digital Platform Power Blockchain and the Algorithmic Society are manifestations of this phenomenon The internet which once seemed an unambiguous benefit to society is now the basis for invasions of privacy massive concentrations of power and wide scale manipulation The algorithmic networked world poses deep questions about power freedom fairness and human agency The influential 1997 Federal Communications Commission whitepaper Digital Tornado hailed the endless spiral of connectivity that would transform society and today little remains untouched by digital connectivity Yet fundamental questions remain unresolved and even more serious challenges have emerged This important collection which offers a reckoning and a foretelling features leading technology scholars who explain the legal business ethical technical and public policy challenges of building pervasive networks and algorithms for the benefit of humanity This title is also available as Open Access on Cambridge Core **Research Handbook on Information Policy** Duff, Alistair S., 2021-10-12 This comprehensive and innovative Research Handbook tackles the pressing issues confronting us at the dawn of the global network society including freedom of speech government transparency and the digital divide Engaging with controversial problems of public policy including freedom of expression copyright and information inequality the Research Handbook on Information Policy offers a well rounded exploration of the history and future of this vital field **Handbook of Research on Comparative Approaches to the Digital Age Revolution in Europe and the Americas** Passarelli, Brasilina, 2015-09-21 The way we talk work learn and think has been greatly shaped by modern technology These lifestyle changes have made digital literacy the new written literacy where those who are not able to use computers are unable to function and perform everyday tasks The Handbook of Research on Comparative Approaches to the Digital Age Revolution in Europe and the Americas explores the new ways that technology is shaping our society and the advances it is bringing along with potential drawbacks such as human jobs being replaced by computers This expansive handbook is an essential reference source for students academics and professionals in the fields of communication information technology sociology social policy and education it will also prove of interest to policymakers funding agencies and digital inclusion program developers This handbook features a broad scope of research based articles on topics including but not limited to computational thinking e portfolios e citizenship digital inclusion policies and information literacy as a form of community empowerment **The Home in the Digital Age** Antonio Argandoña, Joy Malala, Richard Peatfield, 2021-05-30 The Home in the Digital Age is a set of multidisciplinary studies exploring the impact of digital technologies in the home with a shift of emphasis from technology
