The Military Skills Development System 2016

Michael Nwankpa

The Military Skills Development System 2016:

South Africa's Post-Apartheid Military Lindy Heinecken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed and the implications for force procurement, force preparation, force employment and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention, military veterans looking at the difficulties they face in reintegrating back into society and finding gainful employment, gender equality and mainstreaming the rise of military unions and why a confrontational instead of a more corporatist approach to labour relations has emerged. HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence security and civil military relations of countries around the world. **Annual Report** South Africa. Department of Defence, 2016. [The Models of Skill Acquisition and Expertise Development](#)

Raman K. Attri, 2019-03-30 The book offers condensed summaries of twenty-three major skill acquisition and expertise development models presented by leading researchers during the last half a century of classic and new research. This book presents new researchers in learning, training, cognitive sciences or education disciplines with a big picture starting point for their literature review journey. The book presents an easy-to-understand taxonomy of twenty-three models giving new researchers a good bird's-eye view of existing models and theories. They can decide which direction to dig further. The reviews in this book are complemented with over 200 authentic sources which a researcher can read for a detailed and deeper dive and set the direction for further exploration. This book would also act as an essential reference for training learning professionals and instructional designers to design research-based training curriculum to develop the skills of their staff. Chapter 1 of the book elaborates on how the processes of learning, skill acquisition and expertise development are interwoven. Chapter 2 presents a classification system to categorize various models reviewed in the literature under five groups. Chapter 3 describes twelve models of skill and expertise acquisition which are represented in the form of stages used frequently in learning, training and performance literature. The chapter also briefly discusses each model's implications toward developing the skills and expertise of a less proficient individual to a higher level of proficiency. Chapter 4 reviews practice time or task-based models which are theories or models suggesting that acquisition of knowledge, skills development of expertise and performance improvement is a function of nature of the practice, amount of time spent on the task and task type. Chapter 5 presents the factor-based models suggesting the interplay of several factors that influence the acquisition of

knowledge skills development of expertise and performance improvement Chapter 6 embarks on describing expert modeling based models suggesting modeling an expert through elicitation or guidance for the acquisition of knowledge skills development of expertise and performance improvement Chapter 7 covers some newer movements toward cognition based models which are theories or models focusing on mechanisms of cognitive learning for the acquisition of knowledge skills development of expertise and performance improvement Chapter 8 concludes the book by integrating views from various thought leaders to explain a famous staged skill acquisition model

Macrocognition: The Science and Engineering of Sociotechnical Work Systems Paul Ward,Robert R. Hoffman,Gareth E. Conway,Jan Maarten Schraagen,David Peebles,Robert J. B. Hutton,Erich J. Petushek,2018-02-28 The increasing complexity of work systems and changes in the nature of workplace technology over the past century have resulted in an exponential shift in the nature of work activities from physical labor to cognitive work Modern work systems have many characteristics that make them cognitively complex

They can be highly interactive comprised of multiple agents and artifacts information may be limited and distributed across space and time task goals are frequently ill defined conflicting dynamic and emergent planning may only be possible at general levels of abstraction or require adaptive solutions some degree of proficiency or expertise is required the stakes are often high and uncertainty time constraints and stress are seldom absent To complicate matters further cognition in complex work settings is typically constrained by broader professional organizational and institutional practice and policy These features of cognitive work present significant challenges to scientific methodology and theory and subsequent design of reliable interventions Historically philosophers and scientists have attempted to understand the mental activities experienced during cognitive work at multiple levels of analysis using divergent methods Some have examined cognition at an associative contextual functional or holistic level relying on naturalistic methods to understand the higher mental processes as they work in harmony during goal directed behavior Others have embraced experimental methods and favored internal over external validity often reducing cognition to a psychology of fundamental acts such as short term memory access with millisecond shifts in attention More recently Macro cognition has evolved as a complementary paradigm Macro cognitive researchers have studied the cognitive functions and processes associated with skilled adaptive collaborative and resilient cognitive work in the context of the aforementioned complexities of psychotechnical and sociotechnical work systems Typically this research has been carried out using cognitive task analytic techniques that draw on both naturalistic and quasi experimental methods The primary goals of research in Macro cognition are to better understand cognitive adaptations to complexity to increase our theoretical understanding of the organism environment relations by studying the mapping between cognitive work and real world demands and to promote use inspired research capable of improving system performance

Nigeria's Fourth Republic, 1999-2021 Michael Nwankpa, 2022-11-18 This book reflects on Nigeria's fourth republic the country's longest democratic period since it gained independence from Great Britain It argues that although constitutional or political democracy has lasted for over two decades in Nigeria and seen three successful democratic changes of power Nigeria's democracy remains largely militarised During Nigeria's fourth republic political and socio economic affairs have been increasingly dominated by a pervasive military presence and ideology which has seen a redistribution of resources and government funds away from social programmes into an increase in security budgets weapons proliferation and internal military interventions and occupations This institutionalisation of violence has turned the country into a national security state where the rule of force and violence rather than dialogue and compassion reflect everyday reality Whilst acknowledging the history of militarisation during colonial and military rule this book makes a compelling argument for considering the distinct character of the Nigerian nation state's path to militarisation over the last 20 years of experimentation with democracy This book's fresh insights into the fourth republic's path to militarisation will be of interest to researchers of African politics security and development
