*Vitrification in Assisted Reproduction* Michael Tucker, Juergen Liebermann, 2007-11-01 Cryopreservation methods have become well established as an increasingly important therapeutic strategy in assisted reproduction. *Vitrification in Assisted Reproduction: A User's Manual and Trouble Shooting Guide* addresses this cryopreservation technique from an academic and technical viewpoint with specific reference to assisted reproduction in humans. *Molecular Beam Epitaxy* Mohamed Henini, 2012-12-31 This multi-contributor handbook discusses Molecular Beam Epitaxy (MBE), an epitaxial deposition technique which involves laying down layers of materials with atomic thicknesses on to substrates. It summarizes MBE research and application in epitaxial growth with close discussion and a how-to on processing molecular or atomic beams that occur on a surface of a heated crystalline substrate. In a vacuum, MBE has expanded in importance over the past thirty years in terms of unique authors, papers and conferences from a pure research domain into commercial applications, prototype device structures and more at the advanced research stage. MBE is important because it enables new device phenomena and facilitates the production of multiple layered structures with extremely fine dimensional and compositional control. The techniques can be deployed wherever precise thin film devices with enhanced and unique properties for computing, optics or photonics are required. This book covers the advances made by MBE both in research and mass production of electronic and optoelectronic devices. It includes new semiconductor materials, new device structures which are commercially available and many more which are at the advanced research stage. Condenses fundamental science of MBE into a modern reference, speeding up literature review. Discusses new materials, novel applications and new device structures, grounding current commercial applications with modern understanding in industry and research. Coverage of MBE as mass production epitaxial technology enhances processing efficiency and throughput for semiconductor industry and nanostructured semiconductor materials research community.
