Robinson,2008-01-01 A Contemporary Autobiography of a Science Educator reminds readers that they teach who they are and understanding who they are is fundamental for meaningful communication and effective classroom instruction The book is for science educators teacher educators and others who wish to examine their own personal and professional identities in the social and cultural contexts in which their lives are embedded Just as teaching can be viewed as relationship with others this contemporary autobiography is situated on the significance of relationship with self As a contemporary autobiography the narrative reveals

the author's subjective truths while digging deeply into psychosocial motives of power and intimacy. The author reflects on his personal choices and career decisions that led him into and out of high school science teaching. The book contains stories and reflections from summer work camp experiences, undergraduate college days, teacher preparation episodes, and high school science teaching. Story themes are diversity and leadership, group identity and motivation, urban teaching and teacher preparation, and high school science teaching. These themes evolve out of nuclear episodes of the author's storied life that brings present-day understanding and meaning from past actions and interactions. This kind of critical introspection may hold special relevance for teachers, teacher educators, and others who wish to make their own identities salient and relevant to their own needs and interests as well as the needs and interests of students, teacher candidates, and clients whom they serve.

*Teaching and Learning in the Science Laboratory* Dimitris Psillos, H. Niedderer, 2006-05-05. Scope of the book: There is an on-going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers, researchers, and policy makers world-wide in the value of laboratory work for understanding science. This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education: Woolnough, Alsop 1985; Hodson 1993; Hegarthy Hazel 1990; Wellington 2000. Yet in discussing research studies on labwork, several authors express their concern about its effectiveness in facilitating students' understanding of various aspects of scientific inquiry. They point out a comprehensive re-conceptualisation of the aims of labwork and, as a consequence, of investigating what the students actually learn in different contexts: Lazarowitz, Tamir 1994; Tobin, Tippins 1993; Lunetta 1998. It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research: Leach, Paulsen 1999. It appears that the case for research-based labwork emerges in several quarters in science education, particularly among researchers. This book presents and discusses a variety of laboratory practices and their effectiveness. The studies take into account recent theoretical developments and empirical results concerning students' understanding of scientific inquiry. A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher.
