The Nervous System

The nervous system is an extremely complex, highly organized, and very sensitive structure that regulates all the functions of the human body. The main purpose of the nervous system is to receive information from the environment and the body, and to coordinate the response. The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system (CNS) is the part of the nervous system that is located in the head and the spinal cord. It is the main control center of the body, and it is responsible for all the functions of the body. The CNS is divided into the brain and the spinal cord. The brain is the part of the CNS that is located in the head, and it is responsible for all the functions of the body. The spinal cord is the part of the CNS that is located in the spinal column, and it is responsible for all the functions of the body.

Peripheral Nervous System

The peripheral nervous system (PNS) is the part of the nervous system that is located outside the CNS. It is responsible for all the functions of the body, and it is divided into the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for all the functions of the body that are under conscious control, and the autonomic nervous system is responsible for all the functions of the body that are not under conscious control.

The PNS is divided into the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for all the functions of the body that are under conscious control, and the autonomic nervous system is responsible for all the functions of the body that are not under conscious control. The somatic nervous system is divided into the motor and sensory systems, and the autonomic nervous system is divided into the sympathetic and parasympathetic systems.
