Vol.1,2, by Lt. col. Williams History of the wars caused by the French revolution. Vol.3,4, by W.C. Stafford History of England's campaigns in India and China; and of the Indian mutiny William Freke Williams,1864 **Ancient Art and its remains; or a Manual of the Archaeology of Art. Translated by J. The volume as its first target aims at clarifying that peculiar entanglement of complexity causality meaning emergence and intentionality that characterises the unfolding of the natural forms of human cognition As is well known cognition is not only a self organising process It is also a co operative and coupled process If we consider the external environment as a complex multiple and stratified Source which interacts with the nervous system we can easily realise that the cognitive activities devoted to the intelligent search for the depth information living in the Source may determine the very change of the complexity conditions according to which the Source progressively expresses its wild action In this sense simulation models are not neutral or purely speculative the true cognition actually appears to be necessarily connected with successful forms of

reading those forms in particular that permit a specific coherent unfolding of the deep information content of the Source Therefore the simulation models if valid materialise as creative channels i e as autonomous functional systems as the very roots of a new possible development of the entire system represented by mind and its Reality From a general point of view the objectivity of Reality is also proportionate to the autonomy reached by cognitive processes In this sense at the level of cultural evolution reference procedures act as guide mirror and canalisation with respect to primary information flows and involved selective forces they offer themselves as the actual instruments for the constant renewal of the code for the invention and the actual articulation of an ever new incompressibility From an effective point of view they appear as indissolubly linked to the successive definition of specific and innovative measures of the epistemic complexity These measures cannot concern only statistical rarity Shannon or computational incompressibility Kolmogorov Chaitin on the contrary they should also be able to take into account the coupled connection between the Source and the cognitive agent the evolution of this connection as well as the successive constitution of meaning as symbolic form Hence the possible and necessary definition of new axiomatic systems new measure spaces the real displaying of processes of continuous reorganisation at the semantic level Indeed it is only through a complete first order reduction and a correlated non standard second order analysis that new incompressibility will actually manifest itself Therefore the reference procedures appear to be related to a process of multiplication of minds as well as to a process of clarification of meanings which finally emerges as vision via principles
