April 2020 Since infrastructure investment is crucial to faster and inclusive growth it is timely that the NIP is actioned now given that the Indian economy contracted to 7.3% in the financial year 2020-21. This book discusses various aspects of infrastructure financing in detail with a major section devoted to green financing of infrastructure. *The New Age Urban Transportation Systems, Volume I* Sundaravalli Narayanaswami, 2019-03-04 Urbanization is a global phenomenon that hugely constrains existing transportation infrastructure in cities. Urban transportation (UT) challenges are more significant in developing countries with rapid development as the land occupation is dense. Limited urban space and infrastructure fail to meet the increasing traffic demands and to provide reasonable service quality. Therefore, betterment of UT systems is more required than ever. Infrastructural development and transportation operations are mainly directed at citizen welfare and it requires huge capital investments. States initiate urban development by inviting private participation so that operational and commercial risks are minimized and quality of execution is better. Several aspects in planning and management of global UT projects are common. But the approach and solutions are typically developed for a local context and relevance. Specific UT challenges are land use planning, socioeconomic distribution, project designing, implementation, financial analysis, and governmental policies. A comprehensive background of UT systems, challenges involved, and various approaches adopted by different countries are presented along with five real-life Asian cases. The book is aimed as a one-point reference on modern-day developments on urban transportation for a readership of consultants, practitioners, developers, policy makers, and academicians.

Public Transport Planning B. I. Singal, 2018-07-07 Congestion, lack of mobility, and rising air pollution in our cities are becoming areas of serious concern for all stakeholders: authorities, operators, and commuters alike. It is also widely accepted that augmentation of public transport (PT) both in quality and quantity will provide relief. A critical issue in this context is the choice of a particular PT mode for a city. Comprehensive information on various modes, aspects of planning a city-wide PT network, and choice of mode is not easily available at one place to students, planners, and city officials. This book is an attempt to bridge this gap. This book is based on the author's direct experience in planning, design, and implementation of urban transport projects, particularly public transport projects in India and abroad, in the overall context of urban mobility. The content of the book is largely at a conceptual level and brings out the finer points in planning. The book is divided into five parts: i.e. modes of public transport, planning a citywide public transport network, planning road-based modes, planning rail transit, and other planning issues.

Parliament. Lok Sabha, 2011-12-20 Constructing Metropolitan Space Jill Simone Gross, Enrico Gualini, Lin Ye, 2018-12-07 There is little question today that processes of globalization affect national and local economies governance processes and conditions for economic competitiveness in the major urban regions of the world In most liberal democratic countries these processes are occurring according to a rationale which attempts to combine strategies of state supported development with increasing local regional governmental decentralization and autonomy Against this background the issue of metropolitan development is being redefined worldwide along with its institutional frameworks modes of governance policy instruments and spatial planning strategies The overarching assumption of this volume is that metropolitan space far from being consolidated as a policy object is currently being redefined and in some instances constructed and contested as a scale through a variety of policy practices related to spatial economic development objectives Through case studies drawn from across four continents the authors reveal a range of interesting cross national commonalities concerning the power that state actors situated at various spatial scales exert as agents in these processes This volume interrogates key research issues raised by these developments and is intended as a contribution to the establishment of a globally comparative analysis of the construction of metropolitan spaces and scales under conditions of globalization and neoliberalization
