The Nervous System

The nervous system is an extremely complex network of neurons that are capable of processing information throughout the human body. The main purpose of the nervous system is to receive information and send signals that control the body's response. The nervous system is divided into two main parts: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system (CNS) is the part of the nervous system that is located in the brain and spinal cord. It is the main control center of the body and is responsible for processing information and sending signals to the rest of the body. The CNS is divided into two main parts: the brain and the spinal cord. The brain is the part of the CNS that is located in the head and is responsible for processing information and sending signals to the rest of the body. The spinal cord is the part of the CNS that is located in the back and is responsible for sending signals to the rest of the body.

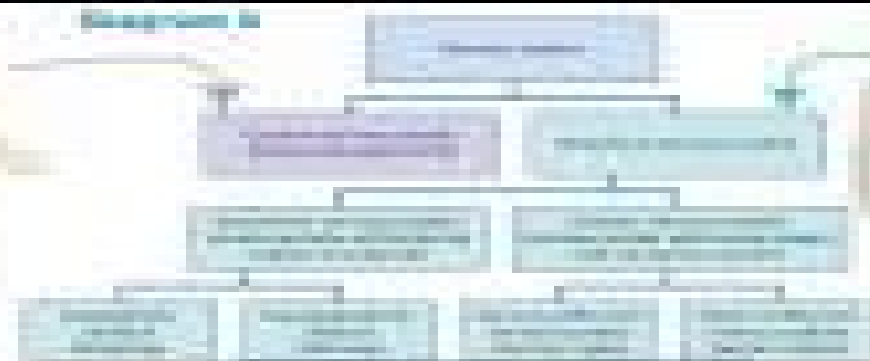

Peripheral Nervous System

The peripheral nervous system (PNS) is the part of the nervous system that is located outside the CNS. It is responsible for sending signals to the rest of the body and is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling voluntary movements, while the autonomic nervous system is responsible for controlling involuntary movements.

The PNS is divided into two main parts: the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for controlling voluntary movements, while the autonomic nervous system is responsible for controlling involuntary movements. The somatic nervous system is divided into two main parts: the motor system and the sensory system. The motor system is responsible for sending signals to the muscles to cause movement, while the sensory system is responsible for receiving information from the body and sending it to the brain. The autonomic nervous system is divided into two main parts: the sympathetic nervous system and the parasympathetic nervous system. The sympathetic nervous system is responsible for controlling the body's response to stress, while the parasympathetic nervous system is responsible for controlling the body's response to relaxation.

The Brain

The brain is the most complex part of the nervous system, and it is responsible for processing information and sending signals to the rest of the body. It is divided into two main parts: the cerebrum and the cerebellum. The cerebrum is the part of the brain that is located in the head and is responsible for processing information and sending signals to the rest of the body. The cerebellum is the part of the brain that is located in the back and is responsible for controlling involuntary movements. The brain is also divided into two main parts: the left hemisphere and the right hemisphere. The left hemisphere is responsible for controlling the right side of the body, while the right hemisphere is responsible for controlling the left side of the body.
