Climate Change and Variability Suzanne Simard, 2010-08-17 Climate change is emerging as one of the most important issues of our time with the potential to cause profound cascading effects on ecosystems and society However these effects are poorly understood and our projections for climate change trends and effects have thus far proven to be inaccurate In this collection of 24 chapters we present a cross section of some of the most challenging issues related to oceans lakes forests and agricultural systems under a changing climate The authors present evidence for changes and variability in climatic and atmospheric conditions investigate some the impacts that climate change is having on the Earth's ecological and social systems and provide novel ideas advances and applications for mitigation and adaptation of our socio ecological systems to climate change Difficult questions are asked What have been some of the impacts of climate change on our natural and managed ecosystems How do we manage for resilient socio ecological systems How do we predict the future What are relevant climatic change and management scenarios How can we shape management regimes to increase our adaptive capacity to climate change These themes are visited across broad spatial and temporal

Ecology of Angola Brian John Huntley, 2023-03-07 This open access book richly illustrates the first and comprehensive account of the country's biomes and ecoregions the driving forces that account for their diversity and vulnerability and the ecological principles that provide an understanding of the patterns and processes that have shaped landscapes ecoregions and ecosystems Angola encompasses the greatest diversity of terrestrial biomes and is the second richest in terms of ecoregions of any African country Yet its biodiversity and the structure and functioning of its ecosystems are largely undocumented The author draws on personal field observations from over 50 years of involvement in ecological and conservation studies in Angola and across Southern Africa The vast recent literature published by researchers in neighboring better resourced countries provides depth to the accounts of ecological principles and processes relevant to Angola and thus contributing to the understanding and sustainable management of its natural resources

Revisiting the Biome Concept with a Functional Lens Daniel M. Griffith, Christopher J. Still, Colin P. Osborne, 2019-08-02 Early biogeographers such as Alexander von Humboldt recognized the broad scale coupling of vegetation and climate This observation shaped the modern biome concept which organizes ecosystems by assumed relationships to environmental controls This approach has been criticized for missing key impacts on the distribution and functioning of biomes like historical contingency biogeographic

history disturbance ecology and evolution Are biomes still a convenient framework for organizing our understanding of biodiversity What factors determine the functional differences among and within biomes and at what spatial temporal and phylogenetic scales are those drivers most important How can we better represent the functional characteristics and dynamics of ecosystems This Research Topic highlights the latest discussions and research on biomes drawing from a wide range of approaches spanning from macroecology and phylogeography to remote sensing and modelling ecosystem responses to global change

Terrestrial Ecosystem Research Infrastructures Abad Chabbi, Henry W. Biology and Breeding of Food Legumes Aditya Pratap, Jitendra Kumar, 2011-03-01 Food legumes are important constituents of the human diet and animal feed where they are crucial to a balanced diet supplying high quality proteins These crops also play an important role in low input agricultural production systems by fixing atmospheric nitrogen Despite systematic and continuous breeding efforts through conventional methods substantial genetic gains have not been achieved With the rise in demand for food legumes pulses and increased market value of these crops research has focused on increasing production and improving the quality of pulses for both edible and industrial

Standard Soil Methods for Long-Term Ecological Research G. Philip Robertson, David C. Coleman, Caroline S. Bledsoe, Phillip Sollins, 1999-10-28 Standardized methods and measurements are crucial for ecological research particularly in long term ecological studies where the projects are by nature collaborative and where it can be difficult to distinguish signs of environmental change from the effects of differing methodologies This second volume in the Long Term Ecological Research LTER Network Series addresses these issues directly by providing a comprehensive standardized set of protocols for measuring soil properties The goal of the volume is to facilitate cross site synthesis and evaluation of ecosystem processes Chapters cover methods for studying physical and chemical properties of soils soil biological properties and soil organisms and they include work from many leaders in the field The book is the first broadly based compendium of standardized soil measurement methods and will be an invaluable resource for ecologists agronomists and soil scientists

Invasive Alien Species Thammineni Pullaiah, Michael R. Ielmini, 2021-04-21 Jedes Jahr breiten sich

invasive gebietsfremde Arten in neue Kosysteme aus. Die von den Eindringlingen verursachten Auswirkungen können sich in kürzester Zeit bemerkbar machen und verheerend sein. Das Thema der invasiven gebietsfremden Arten ist umfassend komplex und auf verschiedenen Ebenen von globaler Bedeutung. Verschärft wird es durch die Globalisierung der Weltwirtschaft und den zunehmenden Handel, durch den die natürlichen Barrieren für den Transfer von Arten durchbrochen werden. Invasive gebietsfremde Arten bedrohen die weltweite Nahrungsmittelversorgung, die Qualität und Verfügbarkeit von Trinkwasser sowie die Stromproduktion und -versorgung. Zusammen mit den zusätzlichen Risiken durch den globalen Klimawandel ist die weltweite Homogenisierung von Pflanzen, Tieren und Mikroben ein wesentlicher Faktor für den sich verschlechternden Gesundheitszustand der Kosysteme und die nachlassenden Kosystemdienstleistungen überall auf der Welt. Um dieser Entwicklung entgegenzuwirken, besteht die dringende Notwendigkeit einer einheitlichen Ausrichtung von Regierungen, Kulturen und Programmen und einer besseren grenzüberschreitenden Koordination. Nur so lassen sich die vielfältigen Bedrohungen durch invasive gebietsfremde Arten für die Umwelt, die Wirtschaft und die Gesundheit von Pflanzen und Tieren sowie insbesondere die menschliche Gesundheit effektiv bekämpfen. Dieses vierbändige Werk ist das erste, das einen umfassenden Satz natürlicher Materialien zu den zentralen Themen bereitstellt, um die gesamte globale Bedrohung durch invasive gebietsfremde Arten sowie die vielfältigen Probleme in verschiedenen Teilen der Welt deutlich zu machen, und es enthält Material, in dem potenziell replizierbare Lösungen zur Bewältigung dieser Bedrohungen aufgezeigt werden. Das Werk betont die Bedrohung durch invasive gebietsfremde Arten auch im Sinne eines globalen Aufrufs zum Handeln. Invasive Arten kennen keine Grenzen. Daher hoffen wir, dass wir durch die Zusammenstellung von Material, das unterschiedliche wissenschaftliche und gesellschaftliche Standpunkte aus aller Welt berücksichtigt sowie durch die Vermittlung von Erkenntnissen und Beispielen zu einer Vielzahl damit zusammenhängender Themen, das globale Bewusstsein stärken und einheitliche nationale Reaktionen auf die Bedrohung durch invasive gebietsfremde Arten fördern können.

Responses to Climate Change in the Cold Biomes Hans J. De Boeck,Erika Hiltbrunner,Anke Jentsch,Vigdis Vandvik,2019-06-05 Climate change is thought to be especially relevant to ecosystems in the cold biomes Observed warming has been higher in cold climates through various positive feedbacks especially declining snow and ice cover and climate projections indicate further rapid warming in the decades to come Temperature change can have profound impacts in cold biome ecosystems either directly in terms of impacts on physiology or growing season length or indirectly via changes in nutrient cycling The regions focused on here are the sub arctic and the sub alpine areas both characterized by short growing seasons and low annual temperatures but with different radiation environments depending on latitude Climate change can have impacts in all seasons Increased spring temperatures can accelerate snowmelt leading to an earlier onset of the growing season while warmer summers may stimulate primary productivity through temperatures closer to metabolic optima and or increased mineralization rates Winter warming can lead to the vegetation being damaged because of exposure to harsh frost without insulating snow cover In all of this concurrent changes in precipitation also play an important role increased snowfall can buffer warming induced advances in snowmelt a higher ratio of rain to snow can greatly accelerate snowmelt in winter and spring and summer drought may reverse growth stimulation by warming directly drought stress or indirectly e g impaired nutrient uptake Micro climate is crucial in these systems and requires particular attention as it can vary widely across the landscape creating different growing environments in the space of a few meters or

even less Interest in cold region responses to climate change does not only arise from the fact that they harbor unique ecosystems that may be endangered but also because they store large amounts of carbon that may be released under climate change However research is challenging because of the remoteness of many of these areas and the harsh conditions during much of the year In spite of this some studies have been carried out over an extensive period spanning decades and yielding information on for example plant community reorganization including invasions and changes in phenology above and or belowground Other studies focus on shorter term effects such as impacts of heat waves late frosts or other anomalous weather including longer term after effects that may differ drastically from other regions because of the short growing season in cold climates Ultimately models are used to predict future changes in vegetation along latitudinal or elevational gradients although phenology and microclimatic variation may pose particular challenges Contributions to this Research Topic focus on climate change encompassing both changes in the mean gradual warming and variability heat waves altered precipitation distribution in cold biomes The Topic contains reports on observed changes or events but also research making use of experimentally imposed environmental changes The focus is varied including phenology physiology soil and vegetation science and biogeochemistry with the aim of providing a comprehensive overview of observed and expected responses to climate change in cold biome ecosystems
