Review of the State of World Marine Capture Fisheries Management Food and Agriculture Organization of the United Nations,2007-01-01 During the first half of the 1990s in response to the increasing concern about many of the world s fisheries a number of international fisheries instruments provided an impetus for countries to strengthen their fisheries management A key step in supporting such efforts is the development of more detailed systematic and comparable

information on fisheries environments and management trends The State of World Marine Capture Fisheries Management Questionnaire was developed by FAO in 2004 to help meet this need The results have been grouped by region and are reported in this publication More than a decade later we are able to look back to see how countries responded to examine whether more fisheries are managed and to determine whether the management tools and strategies employed have improved the overall situation in marine capture fisheries Trends in legal and administrative frameworks management regimes and status of marine capture fisheries are analysed for 29 countries in the Pacific Ocean and presented in this report and on the accompanying CD ROM as an easy to read and informative reference for policy decision makers fishery managers and stakeholders

Overview of mitigation measures to reduce the incidental catch of vulnerable species in fisheries Sacchi, J.,2021-06-23 Potentially harmful contact between fisheries and marine vulnerable species represents a global conservation issue and efforts to mitigate the negative repercussions of these interactions belong in strategies for ensuring the sustainability of fisheries This literature review offers a survey of mitigation measures and techniques that have been developed and tested around the world aiming to address both the incidental catch of highly mobile species specifically cetaceans seabirds sharks and rays and sea turtles and depredation caused by dolphins Based on research detailed in over 300 documents including peer reviewed publications reports from international organizations and papers available on the internet most of the mitigation techniques illustrated are still under development with only a few already adopted through legislation The selected mitigation measures are grouped by main types of fishing gear gillnets and trammel nets longlines and lines trawls purse seines traps and pots and further subdivided according to which of the four main groups of vulnerable species cetaceans seabirds sharks and rays or sea turtles they are designed to protect Preventive and curative approaches covering both technical measures gear modifications strategies as well as acoustic visual magnetic and chemosensory deterrents and management measures are described
