Universe: The Solar System Roger Freedman, Robert Geller, William J. Spectroscopy: The Key to the Stars Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating **NASA Tech Briefs**, 2004 **The [key] to the Planets for the Boys & Girls** Abraham Ensminger, 1924 Unifying the Universe Hasan S. Padamsee, 2020-02-07 Unifying the Universe The Physics of Heaven and Earth presents a non technical approach to physics for the lay science enthusiast This popular textbook which evolved from a conceptual course at Cornell University is intended for non science undergraduate students taking their first physics module This second edition maintains its unique approach in crossing boundaries between physics and humanities with connections to art poetry history and philosophy It explores how the process of scientific thought is inextricably linked with cultural creative and aesthetic aspects of human endeavor opening the readers up to new ways of looking at the world The text has been fully updated throughout to address current and exciting new topics in the field such as exoplanets the accelerating Universe dark matter dark energy gravitational waves super symmetry string theory big bang cosmology and the Higgs boson There is also an entirely new chapter on the Quantum World which connects the fascinating topics of quantum entanglement and quantum computing Key Features Provides a solid yet accessible background to basic physics without complex mathematics Uses a human interest approach to show how science is significant for more than its technological consequences Discusses the arts and philosophies of historical periods that are pertinent to the subject
