Infrastructure and the Complexity of Economic Development David F. Batten, Charlie Karlsson, 2012-12-06 The book examines the complex relationships between infrastructure and the rest of the economy. In particular, it focuses on the contentious issue of whether infrastructure investments stimulate productivity growth, issues of pricing and ownership, and also development problems such as environmental damage. Methods range from traditional production function models and compensating variation approaches to nonlinear methods of dynamic analysis. There is a unique emphasis on the ability of these different methods to allow for the complex interdependencies involved. Six of the fifteen papers deal with these methodological aspects, whereas the remainder addresses specific cases or examples in a variety of countries: Europe, USA, and developing countries.

Municipal Incorporation Activity in the United States Russell M. Smith, 2018-01-02 This book provides a comprehensive analysis of the municipal incorporation activity in the United States over the last several decades and the geographic consequences of the incorporation of new cities. It aims to explore new municipalities and to develop a better understanding and appreciation for these complex local government boundary changes. Since 1990, the United States has witnessed the incorporation of more than 400 new cities. These newly incorporated municipalities (NIMs) were established on the edges of growing metropolitan areas, in beach and mountain resort destinations, and largely in rural counties. The incorporation of these new cities is a complex and politically charged geographic event. These new cities can contribute to metropolitan fragmentation within a region, provide important public services to growing urban areas, and/or exclude unwanted populations. New cities can also result in new school boundaries, new levels of taxation, and new boards and commissions with varied political powers.
