MOP Connection: Circular Motion and Gravitation: sublevels 6 and 7

- The evidence that stimulated Newton to propose the law of universal gravitation emerged from a study of _____. **Answer: A**
 a. the motion of the moon and other celestial or heavenly bodies
 b. the fall of an apple to the Earth
 c. the gravitational interaction of smaller objects upon the Earth
 d. ...nonsense! There was no evidence; it was just proposed as a theory.
- The universal of Newton's law of universal gravitation is a common source of confusion. The universal means that _____.
 a. the amount of gravitational forces is the same for all objects.
 b. the acceleration caused by gravity is the same for all objects.
 c. the force of gravity acts between all objects - not just between the Earth and an object, but also between two people. All objects with mass attract.
 d. ...nonsense! There was no evidence; it was just proposed as a theory.
- According to Newton's gravitation law, the force of gravitational attraction between a planet and an object located upon the planet's surface depends upon _____. Choose all that apply. **Answers: ABC**
 a. the radius of the planet
 b. the mass of the planet
 c. the mass of the object
 d. the volume of the object
 e. ... nonsense! None of these variables affect the force of gravity.
- The more massive that an object is, the more (more, less) that the object will be attracted to Earth.
- The more massive the Earth is, the more (more, less) that another object will be attracted to Earth.
- The greater that Earth's radius is, the less (more, less) that another object will be attracted to Earth.
- In the mathematical form of Newton's law of universal gravitation (see equation at right), the symbol G stands for _____. **Answer: C**
 a. gravity
 b. the acceleration of gravity
 c. the gravitational constant

$$F_{\text{grav}} = \frac{G \cdot m_1 \cdot m_2}{d^2}$$
- TRUE or FALSE:**
 The value of G (in the equation above) is an enormously large number; that explains why (at least in part) the force of gravitational attraction between the Sun and the very distant Earth is such a large number.
Answer: FALSE. G is very small ($\sim 10^{-11}$) ... but the masses are very large.
- TRUE or FALSE:**
 Two lab partners attract each other with a gravitational force. However, it is impossible to calculate such a force since it is only an unproven theory.
Answer: FALSE. Knowing their masses and separation distances, the force of attraction can be calculated using the equation in question #7.
- TRUE or FALSE:**
 The notion that any two objects attract each other gravitationally is a theory. There is no empirical evidence for such a notion.
Answer: FALSE. Cavendish has tested the theory using people-sized masses (actually, smaller than people-masses).
- Orbiting astronauts on the space shuttle do not have weight in space because _____. **Answer: E**
 a. there is no gravity in space
 b. there is no air resistance in space
 c. there are no scales in space
 d. the food is terrible and they work all the time
 e. ... nonsense! The astronauts do have weight in space.

Rogers,2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of

understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking Physics for the Inquiring Mind is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is **Ordinary Differential**
