*International Climate Change Law* Daniel Bodansky, Jutta Brunnée, Lavanya Rajamani, 2017-06-08 This textbook by three experts in the field provides a comprehensive overview of international climate change law. Climate change is one of the fundamental challenges facing the world today and is the cause of significant international concern. In response, states have created an international climate regime. The treaties that comprise the regime are the 1992 United Nations Framework Convention on Climate Change, the 1997 Kyoto Protocol, and the 2015 Paris Agreement. These establish a system of governance to address climate change and its impacts. This book provides a clear analytical guide to the climate regime as well as other relevant international legal rules. The book begins by locating international climate change law within the broader context of international law and international environmental law. It considers the evolution of the international climate change regime and the process of law making that has led to it. It examines the key provisions of the Framework Convention, the Kyoto Protocol, and the Paris Agreement. It analyses the principles and obligations that underpin the climate regime as well as the elaborate institutional and governance architecture that has been created at successive international conferences to develop commitments and promote transparency and compliance. The final two chapters address the polycentric nature of international climate change law as well as the intersections of international climate change law with other areas of international regulation. This book is an essential introduction to international climate change law for students, scholars, and negotiators.
