Acaricides Resistance in Ticks Sachin Kumar, Raquel Cossio-Bayúgar, Estefan Miranda-Miranda, Anil Kumar Sharma, Ashok Kumar Chaubey, 2025-02-25 This book discusses the significance of the chemical acaricides resistance in ticks as a global problem. Resistance is the ability of a tick population to survive and reproduce in the presence of a pesticide that would otherwise be lethal. This resistance threatens the efficacy of a range of acaricides used to control tick populations and consequently has a negative impact on the effectiveness of various pest management strategies. This resistance is caused by the selection of resistant tick genotypes and enhanced metabolic detoxification. To address this problem, the book explores an integrated approach that is needed to identify and manage tick populations that are resistant to acaricides as well as identify and develop novel acaricides that are effective against resistant tick species populations. It describes the complex issues associated with this phenomenon using cutting edge advancement in Bioinformatics and Bioinformation Discovery. The chapters provide current information pertaining to the types of protein protein complexes homodimers heterodimers multimer complexes in context with various specific and sensitive biological functions. The significance of such complex formation in human biology in the light of molecular evolution is also highlighted using several examples. The book serves as a valuable resource for students academicians and researchers studying about tick resistance. **Improving the**
