Yahoo Ask Questions Get Answers:

Online Dating For Dummies Judith Silverstein, Michael Lasky, 2011-03-08 Chances are you've heard about Internet dating from a friend or an online banner ad has caught your eye. If you've given online dating a passing consideration you may have some fears from all those graphic horror stories that jar your senses and your sensibilities. Or you may think that meeting people via the Internet is only for the disenfranchised or socially unskilled. From their own experiences 20 million people can tell you otherwise. *Online Dating For Dummies* will get you off the fence and on the Internet dating path with the skill of a seasoned pro. Like your best friend, this fun reference will give you the straight scoop on: Gearing up with the right computer hardware; Overcoming preconceived notions of who is online; Talking the online lingo; Enjoying conversation in chat rooms; Considering date site options; Establishing your screen identity; Facing the consequences of not posting a photo. Internet dating is growing at double digit rates every year while other forms of finding a connection are flat or falling off. Internet dating although far from perfect is becoming the most effective and efficient method of getting introduced to a large number of available singles. *Online Dating For Dummies* shows you how to get your feet wet and how to dive in making informed choices and exercising good judgment as you: Sign up for a trial run on a dating site; Try to describe yourself for your personal profile; Initiate your first e-mail contact; Make your first in person meeting memorable; Identify frauds and players; Figure out what not to do if you really want to meet someone. Jumping into online dating with no preparation at all is possible but not practical. If you follow the techniques in this friendly guide your odds of meeting great potential matches will greatly improve and you'll have far more fun in the process. [Question Answering over Text and Knowledge Base](#) Saeedeh Momtazi, Zahra Abbasiantaeb, 2022-11-04 This book provides a coherent and complete overview of various Question Answering QA systems. It covers three main categories based on the source of the data that can be unstructured text, TextQA, structured knowledge graphs KBQA, and the combination of both. Developing a QA system usually requires using a combination of various important techniques including natural language processing, information retrieval and extraction, knowledge graph processing and machine learning. After a general introduction and an overview of the book in Chapter 1, the history of QA systems and the architecture of different QA approaches are explained in Chapter 2. It starts with early close domain QA systems and reviews different generations of QA up to state of the art hybrid models. Next, Chapter 3 is devoted to explaining the datasets and the metrics used for evaluating TextQA and KBQA. Chapter 4 introduces the neural and deep learning models used in QA systems. This chapter includes the required knowledge of deep learning and neural text representation models for comprehending the QA models over text and QA models over knowledge base explained in Chapters 5 and 6 respectively. In some of the KBQA models, the textual data is also used as another source besides the knowledge base; these hybrid models are studied in Chapter 7. In Chapter 8, a detailed explanation of some well-known real applications of the QA systems is provided. Eventually, open issues and future work on QA are discussed in Chapter 9. This

book delivers a comprehensive overview on QA over text QA over knowledge base and hybrid QA systems which can be used by researchers starting in this field It will help its readers to follow the state of the art research in the area by providing essential and basic knowledge

Efficient Information Searching on the Web Jonas Fransson, 2010-05 Information searching on the Web has become part of our everyday life. *Efficient Information Searching on the Web* deals with different aspects which are important to become a better searcher. To search for information is one of the most common occupations on the Web. We do it for work, for studies, and in our spare time. We search for information about illnesses, far away countries, or spare parts for the car. The Web is an important source of information, no matter if you are a journalist, a student, a university researcher, or a teacher. Everybody can become more effective when it comes to searching for information. Central matters of the book are: How does a search engine work? How may the search services be used more efficiently? What is the invisible Web? How can the information be managed once it is found?
