Masters of Mathematics Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics *Life Skills Curriculum: ARISE Dropout Prevention, Book 2: So You're Thinking About Staying in School? Everything Is Obvious Duncan J. Watts, 2011-03-29 By understanding how and when common sense fails we can improve our understanding of the present and better plan for the future Drawing on the latest scientific research along with a wealth of historical and contemporary examples Watts shows how common sense reasoning and history conspire to mislead us into believing that we understand more about the world of human behavior than we do and in turn why attempts to predict manage or manipulate social and economic systems so often go awry It seems obvious for example that people respond to incentives yet policy makers and managers alike frequently fail to anticipate how people will respond to the incentives they create Social trends often seem to be driven by certain influential people yet marketers have been unable to identify these influencers in advance And although successful products or companies always seem in retrospect to have succeeded because of their unique qualities predicting the qualities of the next hit product or hot company is notoriously difficult even for experienced professionals Watts argument has important implications in politics business and marketing as well as in science and everyday life
