

What is Cisplatin?

Cisplatin is an anti-cancer agent used to treat different types of solid tumors.

How does it work?

Cisplatin is a platinum agent. Cisplatin binds to DNA creating cross-links between DNA strands. This interferes with the function and replication of DNA.

How is it given?

Cisplatin is administered as an intravenous (IV) infusion over 60 minutes to 6 hours. For some tumors, cisplatin may be given over 24 hours.

Special instructions:

- Cisplatin can cause nausea and vomiting. Sometimes the nausea and vomiting can be severe and last for, or occur several days after receiving cisplatin. Your doctor will prescribe you medicines to keep you from feeling sick and throwing up after receiving cisplatin.
- Cisplatin can affect your hearing. Report any changes in your hearing or a ringing sound in your ears to your doctor. Your hearing will also be tested before and during treatment.
- Prior to and while receiving cisplatin, your kidneys function will be tested regularly.
- Being hydrated before, during and after receiving cisplatin is important to minimise the damage that cisplatin can cause to your kidneys. Your urinary output will be monitored regularly.
- Cisplatin can affect the levels of certain salts in your blood. Your blood will be regularly tested and you will be prescribed some supplements in you IV fluids to prevent the disturbances.
