

Checking the gear oil level

1. Check the gear oil level.

Checking the battery

1. Check the capacity, electrolyte level, and specified gravity of the battery.

Recommended battery capacity:
 CCA/SAE: 380 A
 MCA/ABYC: 502 A
 RC/SAE: 124 Minute
Electrolyte specified gravity:
 1.280 at 20 °C (68 °F)

2. Check that the positive and negative battery leads are securely connected.

Checking the outboard motor mounting height

1. Check that the anti-cavitation plate is aligned with the bottom of the boat. If the mounting height is too high, cavitation will occur and propulsion will be reduced. Also, the engine speed will increase abnormally and cause the engine to overheat. If the mounting height is too low, water resistance will increase and reduce engine efficiency.

NOTE:

The optimum mounting height is affected by the combination of the boat and the outboard motor. To determine the optimum mounting height, test run the outboard motor at different heights.

2. Check that the clamp brackets are secured with the clamp bolts.

Checking the remote control cables

1. Set the remote control lever to the neutral position and fully close the throttle lever.
2. Check that the stopper ① on the throttle cam contacts the fully closed stopper ② on the cylinder block.

3. Check that the alignment mark ③ on the bushing is aligned with the alignment mark ④ on the bracket.
