**Interactive Mental Maths** Peter Patilla, 1999

**Connections Maths** Edward Duffy, G. Murty, Lorraine

Mottershead, 2003 The Connections Maths 7 Teaching and Assessment Book includes many resources that make using the Connections series the most effective and user friendly series available. The resources in this book include a teaching program referenced to the student book syllabus, notes, detailed guidance on teaching each topic, outcomes clearly stated and cross referenced to the student book, assessment and reporting strategies, over 70 photocopiable worksheets for use with talented students, solutions to all worksheets, overview and summary of every chapter and exercise in the student book, answers to activities in the student book, relevant internet sites and further research questions. All this material is also provided on CD ROM to allow for customising.

**CONTROLO 2024** Antonio Pedro Aguiar, Paula Rocha Malonek, Vítor Hugo Pinto, Fernando A. C. C. Fontes, Roman Chertovskih, 2025-04-22 This book offers a perfect insight of the latest research and developments in the fields of dynamic systems and control engineering. Gathering the proceedings of the 16th APCA International Conference on Automatic Control and Soft Computing CONTROLO 2024 held on July 17-19, 2024 in Porto, Portugal, this volume covers a wide range of theoretical and practical issues relating to the development and use of different control approaches such as PID control, adaptive control, non-linear control, intelligent monitoring and control based on fuzzy and neural systems. Further topics include robust control systems and real-time control. Sensors and actuators, measurement systems, renewable energy systems, aeronautic and aerospace systems, as well as industrial control and automation, are also comprehensively covered. All in all, this book offers a timely and thorough survey of the latest research in the fields of dynamic systems and automatic control engineering and a source of inspiration for researchers and professionals worldwide.

**Spectral Geometry of Graphs** Pavel Kurasov, 2023-11-07 This open access book gives a systematic introduction into the spectral theory of differential operators on metric graphs. Main focus is on the fundamental relations between the spectrum and the geometry of the underlying graph. The book has two central themes: the trace formula and inverse problems. The trace formula relates the spectrum to the set of periodic orbits and is comparable to the celebrated Selberg and Chazarain Duistermaat-Guillemin-Melrose trace formulas. Unexpectedly, this formula allows one to construct non-trivial crystalline measures and Fourier quasicrystals, solving one of the long-standing problems in Fourier analysis. The remarkable story of this mathematical odyssey is presented in the first part of the book. To solve the inverse problem for Schrödinger operators on metric graphs, the magnetic boundary control method is introduced. Spectral data depending on the magnetic flux allow one to solve the inverse problem in full generality: this means to reconstruct not only the potential on a given graph but also the underlying graph itself and the vertex conditions. The book provides an excellent example of recent studies where the interplay between different fields like operator theory, algebraic geometry, and number theory leads to unexpected and sound mathematical results. The book is thought of as a graduate course book where every chapter is suitable for a separate lecture.

and includes problems for home studies Numerous illuminating examples make it easier to understand new concepts and develop the necessary intuition for further studies
