Proceedings of the Ocean Drilling Program Ocean Drilling Program, 1993 **Canadian Journal of Forest Research** ,1999 **Anaerobic Treatment of Mine Wastewater for the Removal of Selenate and its Co-Contaminants** Lea

Tan, 2018-09-03 Selenium Se pollution has led to several cases of severe aquatic ecosystem deterioration due to Se poisoning caused by bioaccumulation over time However the removal of selenate SeO_4^{2-} from wastewater streams with co

contaminants has been largely considered as a black box in anaerobic biological systems using mixed consortia. This research aimed at addressing the effect of wastewater characteristics i.e. co-contaminants such as nitrate NO_3 and sulfate SO_4^{2-} , heavy metals and pH on the biological reduction of SeO_4^{2-} and evaluating process integration for Se-laden wastewater treatment with co-contaminants. This study demonstrated that the presence of co-contaminants can actually be beneficial for Se removal provided that the concentrations are carefully monitored and appropriate operating conditions and process configurations are used. The Se removal, total Se and SeO_4^{2-} efficiency increased by 30% in the presence of NO_3 and/or SO_4^{2-} compared to systems with SeO_4^{2-} alone. Additionally, an integrated process of an ion exchange (IX) column and bioreactors showed improved overall removal capacity for SO_4^{2-} and total Se. The knowledge and information gained from this research can help in the advancement and application of biological processes i.e. predicting of reactor performance, solving specific design or practical problems and implementing novel treatment techniques for Se-laden mine wastewater.

APPLIED BIOLOGY OF WOODY PLANTS Ratikanta Maiti, Humberto González Rodríguez, Ch. Aruna Kumari, 2016-08-10. Woody plants occupy dominant vegetation in forest ecosystem. They play an important role in reducing carbon load from the atmosphere and store them as biomass and carbon as sources of energy. Forest trees are sources of timbers, various domestic uses, medicinal purposes, forest products and sources of animal nutrition. At this juncture, there is a great necessity to save forest trees for life security and effective management and maintain an ecobalance to save earth from the clutch of pollution. To fulfill these objectives, a clear understanding of the biology of trees and its applications is an essential prerequisite for effective management and its application. No such book is available to undergraduate and graduate students and teachers. It discusses experimental biology to study the various aspects of tree biology from a practical stand point guide. This deals with general concepts of plant, soil and environments, the vegetation and biodiversity, morpho-anatomical and ecophysiological traits, phenological events and plasticity, branching pattern and branching density, functioning as solar panel for capture of solar radiation for productivity, diversity of leaves, morphological and biochemical traits such as pigments, epicuticular wax, leaf macronutrients necessary for the growth and development and animal nutrition, wood anatomical traits related to timber quality and utility. A special emphasis has been given in the selection of tree species with high ecophysiological traits. The book deals with advances in research and includes our original research results. **LC GC**, 1988.
