Dynamics of Mathematical Models in Biology Alessandra Rogato, Valeria Zazzu, Mario Guarracino, 2016-11-03 This volume focuses on contributions from both the mathematics and life science community surrounding the concepts of time and dynamicity of nature two significant elements which are often overlooked in modeling process to avoid exponential computations The book is divided into three distinct parts dynamics of genomes and genetic variation dynamics of motifs and dynamics of biological networks Chapters included in dynamics of genomes and genetic variation analyze the molecular mechanisms and evolutionary processes that shape the structure and function of genomes and those that govern genome dynamics The dynamics of motifs portion of the volume provides an overview of current methods for motif searching in DNA RNA and proteins a key process to discover emergent properties of cells tissues and organisms The part devoted to the dynamics of biological networks covers networks aptly discusses networks in complex biological functions and activities that interpret processes in cells Moreover chapters in this section examine several mathematical models and algorithms available for integration analysis and characterization Once life scientists began to produce experimental data at an unprecedented pace it became clear that mathematical models were necessary to interpret

data to structure information with the aim to unveil biological mechanisms discover results and make predictions The second annual Bringing Maths to Life workshop held in Naples Italy October 2015 enabled a bi directional flow of ideas from and international group of mathematicians and biologists The venue allowed mathematicians to introduce novel algorithms methods and software that may be useful to model aspects of life science and life scientists posed new challenges for mathematicians

When Critical Multiculturalism Meets Mathematics Patricia L. Marshall,Jessica T. DeCuir-Gunby,Allison W. McCulloch,2015-12-14 When Critical Multiculturalism Meets Mathematics details the development and outcomes of a teacher professional development project that merged multiculturalism and mathematics In six compact chapters the authors describe the impetus for their multi year project and present rich case studies of nine teacher participants The cases stand alone as compelling reading yet Marshall et al extend beyond their distinctiveness to explain the statistical data related to the project s broader impact Emphasizing both qualitative and quantitative findings makes this book ideal for novice researchers interested in mixed method study Likewise the authors unveil the anatomy and a few complexities of conducting research in the real world contexts of schools including participant recruitment and resolution of unanticipated matters that can arise within research teams A unique twist in the final chapter is Marshall et al s critique of their own missteps as researchers which are used skillfully and unobtrusively to proffer tips for future studies They conclude by theorizing affirmed intersectionality identified as the critical element that facilitated teachers recognition and acceptance of the compatibility between the study s two components

Computational Methods In The Fractional Calculus Of Variations Ricardo Almeida, Shakoor Pooseh, Delfim F M Torres, 2015-03-19 This book fills a gap in the literature by introducing numerical techniques to solve problems of fractional calculus of variations FCV In most cases finding the analytic solution to such problems is extremely difficult or even impossible and numerical methods need to be used The authors are well known researchers in the area of FCV and the book contains some of their recent results serving as a companion volume to Introduction to the Fractional Calculus of Variations by A B Malinowska and D F M Torres where analytical methods are presented to solve FCV problems After some preliminaries on the subject different techniques are presented in detail with numerous examples to help the reader to better understand the methods The techniques presented may be used not only to deal with FCV problems but also in other contexts of fractional calculus such as fractional differential equations and fractional optimal control It is suitable as an advanced book for graduate

students in mathematics physics and engineering as well as for researchers interested in fractional calculus

Contexts of Learning Mathematics and Science Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement
