

Vauxhall Movano 1998-2003 Electrical Systems

A - CHECKING

Check and ensure that:

- the battery tray and cover are not cracked or split.
- the top of the battery is clean.
- the terminals are in good condition.

B - PRECAUTIONS

It should be remembered that a battery:

- contains sulphuric acid, which is a dangerous product.
- produces oxygen and hydrogen during charging. The mixture of these two gases forms a detonating gas, hence the risk of explosion.

1) DANGER - ACID

The sulphuric acid which is contained in the battery is toxic and corrosive. It can burn the skin, damage clothing, corrode the terminals.

It is also very important when handling a battery, to take the following precautions:

- to protect your eyes with goggles.
- to wear acid gloves and clothing.

It is vital:

- to ensure that there is no sulphation on the terminals.
- to clean and grease the terminals if necessary.
- to check that the nuts are correctly tightened on the terminals. Loose nuts could cause starting faults or charging faults which could cause sparks, making the battery liable to explode.
- to check the electrolyte level.

Batteries with sets of removable plugs:

- remove the cover by hand or by using a screw drill operator.
- check that the electrolyte level in all the cells is well above the level of the separators.
- if necessary, use deionised/distilled water to top up the level.

Note: certain types of battery have venting facilities which allow the build-up of gas to be vented.

Note: add electrolyte to the cells nearest the battery.

2) DANGER - EXPLOSION

When a battery is being charged in a vehicle or when the battery is being charged in a workshop, hydrogen gas is produced. This gas is highly explosive and the quantity of gas produced is proportional to the intensity of the charging current.

The oxygen and the hydrogen join together in the open air, on the surface of the plates and form a highly explosive mixture.

The smallest of sparks, a cigarette or a recently extinguished match are sufficient to cause an explosion. The explosion is so strong that the battery can shatter and the acid is dispersed into the surrounding atmosphere. People nearby are at risk (burned, clothing, paint, and splashes). The acid splashes are harmful to the eyes, face and hands. They also attack clothing.
