School-based Assessment Report

GENERAL OBSERVATIONS

[illegible]

"This report is based on the findings from the 2008 National Assessment of the State of the Environment (NAE) conducted by the U.S. EPA. The report is the first of its kind to provide a comprehensive overview of the state of the environment in the United States. It covers a wide range of topics, including air quality, water resources, land use, and climate change. The report is intended to provide a baseline for future assessments and to inform policy decisions. It is a valuable resource for policymakers, researchers, and the public alike." [Read more...](#)

Abstracts are also included to provide with an account of the things people often experience the authors involved in their lives. The first two chapters provide another perspective about how people are experiencing themselves in the world.

For example, although other strategies are suggested to improve processes for teacher training and induction, all would have to be carefully tailored, based on fully and carefully understood cultural differences, across different social structures and social class, and different levels of teacher education and different other aspects of participation, such as teacher work, (organized) groupworking, classroom, their other various activities, and relationships. It is not that "which" strategy is chosen and implemented and put into practice in North American teaching opportunities but rather, *how* teacher education is chosen.
