Sustainable Urban Supply Chain Management:

Sustainable Urban Supply Chain Management Ade Asefeso MCIPS MBA, 2015-01-03 Supply Chain optimization is a topic of increasing interest today whether the main intention is to maximize the efficiency of one's global supply chain system or to pro actively make it greener There are many changes that can be made to improve the performance of a supply chain ranging from where materials are purchased the types of materials purchased how those materials get to you how your products are distributed and many more An additional question on the mind of some decision makers is Can I minimize my environmental footprint and improve my profits at the same time

Sustainable Urban Logistics: Concepts, Methods and Information Systems Jesus Gonzalez-Feliu, Frédéric Semet, Jean-Louis Routhier, 2013-09-07 Since the 1990's researchers practitioners and public administrations have given more thought to urban logistics However their interests and goals are not the same and several approaches do not produce efficient logistics systems as a result This book aims to provide both a conceptual framework for urban logistics planning and management and to create a basis for deploying solutions that aim to reduce the main nuisances related to urban goods The proposed book is divided in two parts The first proposes a set of methodological chapters written by key authors which aim to support decision makers in their current choices related to urban logistics In addition to public authorities aims and goals the book highlights the importance of private actors and shows how supply chain management can deal with the problems of the last urban mile and its integration in global logistics chains The second presents several applied research works that deal with current planning and practice issues in urban logistics such as the role of city planning the place of night deliveries in carrier organization the limits of logistics pooling and the real estate market among others The book was written by key authors all having considerable research experience and recognised as experts in their respective fields Each chapter presents methods and results of research works written for a broad audience and more precisely directed to both academics and practitioners

Sustainable Urban Logistics Jesus Gonzalez-Feliu, 2018-03-27 Urban logistics has been a subject of interest to researchers and practitioners for more than 20 years in France and Europe and more than 40 in the United States Nevertheless the subject remains difficult to address by a lack of unification in the definitions and proposed methods but also by what makes its great richness the diversity of actors and the pluridisciplinarity of the methods and techniques available This book which synthesizes more than 10 years of personal research on the subject but also experience within different teams and projects intends to bring a unified vision and more and more followed at the international level on logistics planning Urban development It begins with an overview of research in urban logistics and then describes and defines the main components flows actors infrastructures management components technologies regulations and financing actions A unified vision of these elements as well as the definition of sustainable urban logistics is proposed Then the book presents the basics of planning and managing sustainable urban logistics First the basics of the before after analysis are introduced not only for the experiments but also for the simulation of

scenarios To carry out this type of analysis two main groups of methods are needed methods for estimating flows and methods for calculating evaluation indicators The book presents the main global standards and dominant models for the estimation of the urban freight transport demand i e of freight transport needs in urban areas Then it presents the methods for estimating and simulating transport and distribution schemes i e transport supply as well as a proposal for integrated supply demand modeling All these methods are presented for immediate application to practitioners accompanied by summary tables and parameters necessary for their implementation As far as evaluation is concerned the book presents a framework for the choice of sustainable indicators and scorecards Second the main methods for economic environmental social and accessibility assessment are presented They are accompanied by tables and figures necessary for their implementation Finally the main applications of the proposed methods are introduced The book is meant to be a practical guide to applying the main methods from scientific research to a practical context and presents examples of quantified and explained application It is thus the first book that summarizes and presents the main unified methods to help the different decision makers to implement them in their actions of planning and management of the urban logistics and the transport of goods in town

The Routledge Handbook of Urban Logistics Jason Monios, Lucy Budd, Stephen Ison, 2023-06-23 The Routledge Handbook of Urban Logistics offers a state of the art comprehensive overview of the discipline of urban and city logistics The COVID 19 pandemic and the rise in internet shopping in particular have placed new demands on urban logistics which require innovative technological and policy responses Similarly the necessity for sustainable urban logistics offers both a challenge and opportunity for development and seeks to address traffic congestion local air quality traffic related degradation the use of energy safety aspects and noise Featuring contributions from world leading international scholars the chapters examine concepts issues and ideas across five topic areas that reflect the increasingly diverse nature of current research and thinking in urban logistics transport modes urban logistics sectors technical analysis policy and sustainability Each chapter provides an overview of current knowledge identifies issues and discusses the relevant debates in urban logistics and the future research agenda This handbook offers a single repository on the current state of knowledge written from a practical perspective utilising theory that is applied and developed using real work examples It is an essential reference for researchers academics and students working in all areas of urban logistics from policy and planning to technology and sustainability in addition to industry practitioners looking to develop their professional knowledge

Urban Consolidation Centres Henrik Johansson, 2019-05-09 Urban Consolidation Centres UCCs are often conceived as an enabler to alleviate negative effects associated with distribution of goods in cities such as traffic congestion and hazardous emissions UCCs not only have the potential to reduce these effects but also provide alternative distribution solutions by introducing new transshipment points Despite their potential UCCs often fail to be self supporting and are often dependent on subsidies which is not considered to be sustainable in the long run In response this thesis takes its point of departure in the two

business models elements value propositions and target customers A business model is often viewed as an enabler to generate revenue and UCCs have the potential to generate revenue by offering services to their customers and the customers pay for the services To understand how customers can benefit from UCCs and provide arguments why they should use these it is important to understand the relationship between customers needs and the services UCCs can provide The purpose of this thesis is to identify and describe the potential relationship between needs of UCC customers and UCC services The research in the thesis is both explorative and descriptive where a first step is to identify customer needs UCC services and value propositions The descriptive part is to describe them and it is also the foundation for understanding the relationship between customer needs and UCC services Through the analysis and discussion multiple customer needs are identified and described for seven customer groups and the UCC operator all of which could be considered customers of UCCs The thesis also adds to the UCC literature with three new identified UCC services e commerce with used products advertisement and registration in computer system The outcome of the analysis also provides illustrations of how customer needs can be matched with UCC services For the most studied customer group receiver of goods a total of 29 different matches were identified which illustrates the possibilities but also the complexity of the relationships To understand the relationship three different types of gaps were also identified that have implications for future research The main contributions to research and the UCC literature in particular are enlargement of the scope of customers and the illustration of the relationships between customer needs and UCC services The illustrations include contributions such as identifying mapping and describing the customer needs UCC services and value propositions An important first step is to understand how customer needs and UCC services can be linked and this thesis provides examples of how this can be achieved Viewing every stakeholder as a potential customer opens up the opportunity to fulfil their needs and the potential to generate revenue which in turn could close the gap in the problem of non self supporting UCCs Furthermore with self supporting UCCs the number of freight vehicles can be reduced and this may lead to more attractive cities with less traffic congestion and lower emissions

Urban Health, Sustainability, and Peace in the Day the World Stopped Ali Cheshmehzangi, 2021-08-30. This book covers the nexus between urban health, sustainability, and peace. Urban Health, Sustainability, and Peace is the first book that attempts to put these three critical areas together. This novelty approaches the subject matter by delving into evaluating what works, what does not work, and what should be done to achieve healthy cities. We believe this book will be beneficial to a wide range of stakeholders, particularly policymakers, planners, and developers who continuously shape and reshape the structure and environments of our cities and communities. Unfortunately, in most cases, the healthiness of the cities may not be of their immediate concern. Nevertheless, it is the concern of the end users, citizens, or simply those who live and work in cities and communities worldwide. To safeguard peace in cities, one has to consider sustaining urban health, and that is the main aim of this book. The ongoing pandemic gives us an excellent reason to study cities' health. During such a disruptive time, we detect many flaws in cities and communities around the world. We primarily identify the negative impacts on sustainability and peace in cities. In order to sustain a healthy city, this book evaluates six sustainability dimensions: physical, environmental, economic, social, institutional, and technical. It then utilizes eight primary dimensions of positive peace, evaluating critical areas for future considerations in urbanism. These considerations include making cities smarter, more resilient, and more sustainable. The book's ultimate goal is to highlight how we should progress to maintain and sustain urban health. As a continuation to *The City in Need*, this book covers the nexus between urban health, sustainability, and peace. Furthermore, by reflecting on the ongoing pandemic crisis, metaphorically labelled as *The Day the World Stopped*, we delve into some key areas beyond the usual planning and policy guidelines. Lastly, the book intends to highlight what has not been studied before, i.e., the relationship between urban health, sustainability, and peace.
