Hydrogen, the Post-oil Fuel ? Edouard Freund, 2013. Hydrogen is it the energy vector for the future or on the contrary limited for many more decades, possibly even until the end of the century to its current applications in the field of chemistry and refining. Advocates of the hydrogen civilization and the skeptics, even the declared opponents, are deeply divided over this issue. For the first time following a technological revolution, hydrogen would play a universal role alongside electricity in transport, leading to radical elimination of CO2 emissions. For the second, hydrogen will remain restricted to its current applications due to the insoluble problems inherent in its generalized use, especially in transport.
