

214 Valve mechanism

Adjustment

Regarding: D12D

For unit injectors, adjusting preload, see *Unit injectors, checking* page 126

Note that valves and unit injectors should be adjusted in numerical order according to the camshaft's marking when the engine is rotated in its rotational direction.

By adjusting in this order, it is not necessary to rotate the crankshaft more than two revolutions to adjust all valves and unit injectors.

Use a coloured felt marker to mark the rocker arms that have been checked and adjusted.

Setting marks

In addition to the TDC-mark for upper TDC on cylinder 1, the camshaft has 6 markings (1 per cylinder).

Each marking consists of one digit (1-6) and a line mark.

The digit indicates that rocker arms for **inlet valves, exhaust valves and unit injectors**, on the cylinder that matches the digit marking, are in position for adjusting. This is conditional on the camshaft's line marking being between the marks on the bearing cap.

NOTE! It is important that the camshaft line marking **stands between the marks on the bearing cap** when adjustments are performed, otherwise there is a risk that the rocker arm's roller does not rest against the basic circle of the camshaft.
