Harnessing Renewable Energy in Electric Power Systems Boaz Moselle, Jorge Padilla, Richard Schmalensee, 2010 Reflecting its reliance on fossil fuels the electric power industry produces the majority of the world's greenhouse gas emissions The need for a revolution in the industry becomes further apparent given that decarbonization means an increasing electrification of other sectors of the economy in particular through a switch from gasoline to electric vehicles Of the options for producing electric power without significant greenhouse gas emissions renewable energy is most attractive to policymakers as it promises increased national self reliance on energy supplies and the creation of new industries and jobs without the safety and political concerns of nuclear power or the unproven technology of carbon capture and storage Drawing on both economic theory and the experiences of the United States and EU member states *Harnessing Renewable Energy* addresses the key questions surrounding renewable energy policies How appropriate is the focus on renewable power as a primary tool for reducing greenhouse gas emissions If renewable energy is given specific support what form should that support take What are the implications for power markets if renewable generation is widely adopted Thorough and well evidenced this book will be of interest to a broad range of policymakers the electric power industry and economists who study energy and environmental issues

Unintended Consequences of Renewable Energy Otto Andersen, 2013-10-24 Energy technologies in the future will need to be based on renewable sources of energy and will ultimately need to be sustainable This book provides insight into unintended negative impacts and how they can be avoided In order to steer away from the pitfalls and unintended effects it is essential that the necessary knowledge is available to the developers and decision makers engaged in renewable energy The value of this book lies in its presentation of the unintended health and environmental impacts from renewable energies The book presents results from cross disciplinary research on the implementation of alternative fuels in the transport sector namely hydrogen electricity and biodiesel This is followed by an assessment of environmental impacts from the production of solar cells Critical reviews on the use of nanotechnology and nanomaterials in the energy technologies is then provided with the formation of nanoparticles during combustion of bio blended diesel and their toxic effects discussed in detail

Environmental Concerns and Sustainable Development Vertika Shukla, Narendra Kumar, 2019-07-03 The prevailing global environmental crisis is primarily because of non standardized parameters for environmental regulation Unplanned expansion of economic activities consideration for environmental conservation and several associated problems are emerging due to degradation in quality of ambient environment such as clean air safe drinking water and quality of food particularly in developing nations Due to poor casual execution of EIA protocol newly developing countries are preferred destination for establishing pollution emitting industries which results in degradation and depletion of natural resources Lack of environmental policy intervention is another major attraction for establishing such industries in these nations In order to

ensure sustainable development the highest priority issues include the monitoring and eradication of environmental problems which arise due to economic development Initiation of any form of economic development primarily results in loss of forests and thus biodiversity followed by deterioration in quality of air and contamination of natural resources The worst impact of non standardized economic development is the contamination of air water and soil Sustainable development ensures responsible interface with the environment to minimize the depletion or degradation of natural resources and ensure long term environmental quality It involves integrated approaches in understanding the importance of environmental management systems and policy inventions leading to improved environmental performance The present book is proposed to address the environmental concerns associated with economic development and approaches involved to attain sustainable economic development which include monitoring of the quality of air deforestation quality of water resources soil erosion and degradation of the natural environment
