harsher climate By 2020 sustainable land management practices applied to 1 million hectares can offset most of the expected shorter term yield decline gradual extension of these practices to 50 percent of cropland possibly combined with extra irrigation can also counter balance longer term climate change impacts Climate smart planning and design of irrigation and hydropower can more than halve the risks and related costs of making the wrong investment decision The Federal Government could consider 10 short term priority responses to build resilience to both current climate variability and future change through actions to improve climate governance across sectors research and extension in agriculture hydro meteorological systems integration of climate factors into the design of irrigation and hydropower projects and mainstreaming climate concerns into priority programs such as the Agriculture Transformation Agenda *Ecosystem Services and Global Trade of Natural Resources* Thomas Koellner,2013-06-17 The utilization of natural resources to satisfy worldwide growing consumption of goods and services has severe ecological consequences Aside from the projected doubling of food consumption in the next fifty years the growing trade of biofuels and other commodities is a global challenge as the economic activities in the primary sector i e mining fisheries aquaculture forestry and agriculture can damage biodiversity and ecosystem services This should be taken into account in the decision making affecting the global value chains linking consumer retailer processor and producer in the North and the South To cover the topic of ecosystem services and global trade this book is organized into four major parts Part 1 gives the theoretical framework from an ecological economic and political perspectives Part 2 explores how internationally traded biophysical commodities from agriculture forestry and fisheries translates into a virtual flow of land freshwater and marine ecosystems Part 3 describes how two widely used accounting tools i e Life Cycle Assessment and Green National Accounts deal with international aspects of ecosystem services and Part 4 shows how instruments like labelling bans or payments for ecosystem services in the private and public sector can influence trade patterns and the management of ecosystem services This collection is a valuable contribution to the global change science dealing with ecosystem services It illustrates the consequences of international trade on global ecosystem services and provides an overview of accounting tools and of market based policy instruments to address negative and positive externalities The book is certainly innovative because it brings together research findings from distinct disciplines especially Industrial Ecology and Ecosystem Sciences as well as Environmental Economics and Political Science
