

particle where the equivalent spring is to be attached is equal to the potential energy of a spring of equivalent stiffness placed at that location.

2.22 The FBD is shown at an arbitrary instant.

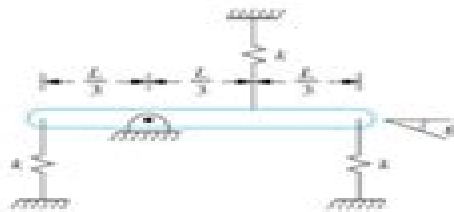

FIGURE 2P.22

2.23 At an arbitrary instant the upper bar has rotated through an angle θ , measured positive clockwise. The lower bar has an angular displacement ϕ , measure counterclockwise. The displacements of the particles must be the same where the rigid bar is attached, $\frac{l}{2}\theta = \frac{5l}{6}\phi$ or $\phi = \frac{3}{5}\theta$. The FBDs are shown at an arbitrary instant.

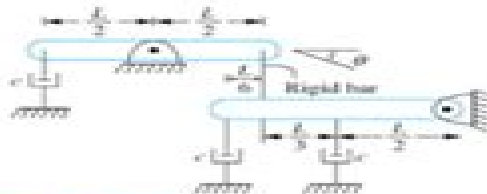

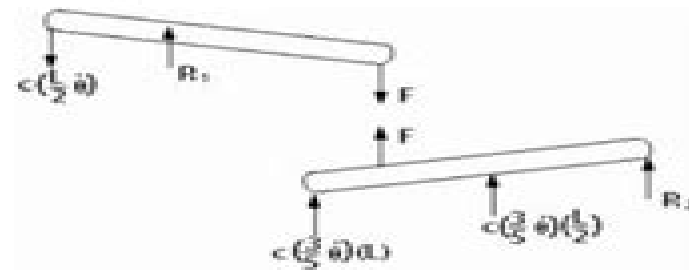

FIGURE 2P.23

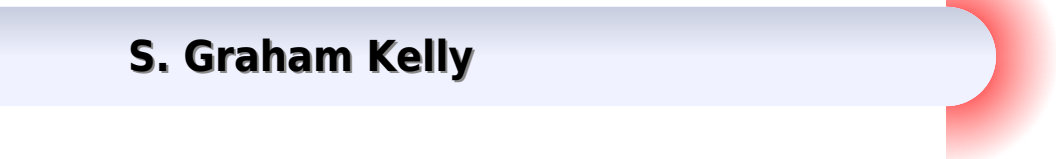

2.24 The equivalent systems method is used to derive the differential equation for linear SDOF systems. It can be used to model a linear SDOF system with an equivalent mass-spring-viscous damper model. Using a linear displacement as the generalized coordinate the equivalent mass, the equivalent stiffness, the equivalent damping viscous damping coefficient and the equivalent force are determined using the kinetic energy, potential energy, energy dissipated by viscous dampers and the work done by non-conservative forces.

2.25 Static spring forces not drawn on the FBD of external forces when they cancel with a source of potential energy for a linear system and the generalized coordinate is measured from the system's equilibrium position.

2.26 No, the equivalent systems method cannot be used for a nonlinear system.

and Damage Aurore Claude-Taupin,Pavel Ivanov,Jing Pu,Jingyue Jia Cassano ,Bhawana Bissa,2025-08-11 Cells encounter a
spectrum of physiological and pathological challenges To ensure their survival cells deploy intricate mechanisms for self
protection and recovery Numerous stressors including both external and internal factors such as chemical physical and
microbial stimuli have the potential to damage intracellular macromolecules and organellar integrity threatening survival
Detection of these alterations is essential for coordinating effective responses to cellular stresses and damage The cellular
protective response involves membrane compartments such as the autophagy lysosome system as well as membraneless
compartments such as stress granules Metabolic signaling pathways such as mTOR and AMPK undergo rewiring to conserve
energy and resources prioritizing crucial cellular processes Together these mechanisms collectively alleviate stress and
minimize damage thereby maintaining cellular homeostasis The ability of cells to survive is determined by a multitude of
factors and is intricately linked to various human diseases including cancer neurodegenerative disorders and viral infections
Thus delving into the molecular mechanisms underlying cellular survival offers promising insights into numerous biological
pathways and holds clinical significance **Scientific and Technical Aerospace Reports** ,1987 Lists citations with
