**STEM Teachers and Teaching in the Digital Era** Yifat Ben-David Kolikant, Dragana Martinovic, Marina Milner-Bolotin, 2020-02-20 This book brings together researchers from Israel and Canada to discuss the challenges today's teachers and teacher educators face in their practice. There is a growing expectation that the 21st century STEM teachers re-examine their teaching philosophies and adjust their practices to reflect the increasing role of digital technologies. This expectation presents a significant challenge to teachers who are often asked to implement novel technology-rich pedagogies they did not have a chance to experience as students or become comfortable with. To exacerbate this challenge, the 21st century teachers function not only in a frequently changing educational reality manifested by continuous reforms but are also bombarded by often contradictory and competing demands from the legislators, administrators, parents, and students. How do we break the vicious circle of reforms and support STEM teachers in making a real change in student learning? This book is unique for at least three reasons. First, it showcases research situated in Israel and Canada that examines the challenges today's teachers and teacher educators face in their practice. While the governments of both countries emphasize STEM education, their approaches are different and thus provide for interesting comparisons. Second, in addition to including research-based chapters, prominent scholars discuss the contributions in each of the book's sections, problematizing the issues from a global perspective. Third, technology has a potential to empower teachers in this era of change, and this book provides the unique insights from each country while allowing for comparisons, discussing solutions, and asking new questions. This book will be of interest to all involved in STEM teacher education programs or graduate programs in education as well as to educational administrators interested in implementing technology in their schools.

**Hazardous Wastes** Richard J. Watts, Amy L. Teel, Courtney M. Gardner, 2023-05-09 Hazardous Wastes: An illuminating problem-solving approach to source area analysis, environmental chemodynamics, risk assessment, and remediation. In the newly revised second edition of *Hazardous Wastes: Assessment and Remediation*, a team of distinguished researchers delivers a foundational and comprehensive treatment of all aspects of hazardous waste problems. The book offers two sections: one on assessment and the following on remediation, while exploring topics crucial to the study of environmental science and engineering at the senior or master's level. This latest edition includes a new emphasis on the chemistry of emerging contaminants, including perfluorinated compounds, 1,4-dioxane, methyl tert-butyl ether, and personal care products. It also offers updated data on contaminant Threshold Limit Value, Reference Dose, Slope Factor, Reference Concentration, and Inhalation Unit Risk. New remediation chapters also provide many design problems incorporating economic analyses and the selection of various design alternatives. Approximately 200 new end-of-chapter problems with solutions have been added as well. Readers will also find a thorough introduction to hazardous wastes, including discussion of pre-regulatory disposal and hazardous waste legislation. Comprehensive discussions of common hazardous wastes, including their nomenclature, industrial uses, and

disposal histories In depth explorations of partitioning sorption and exchange at surfaces as well as volatilization Extensive descriptions of the concepts of hazardous waste toxicology and quantitative toxicology Perfect for senior and masters level college courses in hazardous wastes in Environmental Science Environmental Engineering Civil Engineering or Chemical Engineering programs Hazardous Wastes Assessment and Remediation will also earn a place in the libraries of professional environmental scientists and engineers      *Subject Guide to Books in Print* ,1993      **Modelling of the Interaction of the Different Vehicles and Various Transport Modes** Aleksander Ślaskowski,2019-01-28 This book discusses various issues of modeling freight and passenger traffic and explores the common approaches and regional differences The latter may be a consequence of national legislation or the various approaches that are adopted by scientists around the globe It focuses on the organization of transcontinental transport and aspects of planning and harmonizing the movement of various transport means particularly intermodal and multimodal transport New approaches to the prediction of transportation needs are also considered Written by international experts the book is divided into 2 parts the first part analyzes passenger transport while the second addresses freight transport It is intended wide audience including university professors graduate and Ph D students transport professionals and logistics specialist      Advancements in Geotechnical Engineering Meng-Chia Weng,Shima Kawamura,Jianwen Ding,2021-07-10 With increasing urbanization and development of society advancement in geotechnical technologies is essential to the construction of infrastructures Geotechnical Investigation is the first step of applying scientific methods and engineering principles to obtain solutions to civil engineering problems The studies presented in this volume deal with the attempts made by scholars and engineers to address the latest development in geotechnical engineering such as characterization of geomaterials slope stability tunneling mitigation of geohazards and some other geotechnical issues that are quite relevant in today s world This volume is based on contributions to the the GeoChina International Conference on Civil Transportation Infrastructures From Engineering to Smart Green Life Cycle Solutions Nanchang China 2021      Fighter Aircraft Maneuver Limiting Using MPC: Theory and Application Daniel Simon,2017-09-12 Flight control design for modern fighter aircraft is a challenging task Aircraft are dynamical systems which naturally contain a variety of constraints and nonlinearities such as e g maximum permissible load factor angle of attack and control surface deflections Taking these limitations into account in the design of control systems is becoming increasingly important as the performance and complexity of the aircraft is constantly increasing The aeronautical industry has traditionally applied feedforward anti windup or similar techniques and different ad hoc engineering solutions to handle constraints on the aircraft However these approaches often rely on engineering experience and insight rather than a theoretical foundation and can often require a tremendous amount of time to tune In this thesis we investigate model predictive control as an alternative design tool to handle the constraints that arises in the flight control design We derive a simple reference tracking MPC algorithm for linear systems that build on the dual mode formulation with guaranteed

stability and low complexity suitable for implementation in real time safety critical systems To reduce the computational burden of nonlinear model predictive control we propose a method to handle the nonlinear constraints using a set of dynamically generated local inner polytopic approximations The main benefit of the proposed method is that while computationally cheap it still can guarantee recursive feasibility and convergence An alternative to deriving MPC algorithms with guaranteed stability properties is to analyze the closed loop stability post design Here we focus on deriving a tool based on Mixed Integer Linear Programming for analysis of the closed loop stability and robust stability of linear systems controlled with MPC controllers To test the performance of model predictive control for a real world example we design and implement a standard MPC controller in the development simulator for the JAS 39 Gripen aircraft at Saab Aeronautics This part of the thesis focuses on practical and tuning aspects of designing MPC controllers for fighter aircraft Finally we have compared the MPC design with an alternative approach to maneuver limiting using a command governor
