Some of the answers below may differ in format but have the same value as your result. Please check with your instructor if a specific format is desired.

Chapter 2

2-1. Define

Answers:

(a) molar mass.

The molar mass is the mass in grams of one mole of a chemical species.

(c) millimolar mass.

The millimolar mass is the mass in grams of one millimole of a chemical species.

2-3. Give two examples of units derived from the fundamental base SI units.

Solution:

$$\text{The liter: } 1 \text{ L} = \frac{1000 \text{ mL}}{1 \text{ L}} \times \frac{1 \text{ cm}^3}{\text{mL}} \times \left(\frac{\text{m}}{100 \text{ cm}} \right)^3 = 10^{-3} \text{ m}^3$$

$$\text{Molar concentration: } 1 \text{ M} = \frac{1 \text{ mol}}{\text{L}} \times \frac{\text{L}}{10^{-3} \text{ m}^3} = \frac{1 \text{ mol}}{10^{-3} \text{ m}^3}$$

2-4. Simplify the following quantities using a unit with an appropriate prefix

Solutions:

(a) $5.8 \times 10^8 \text{ Hz}$

$$5.8 \times 10^8 \text{ Hz} \times \frac{\text{MHz}}{10^6 \text{ Hz}} = 580 \text{ MHz}$$

(c) $9.31 \times 10^7 \mu\text{mol}$

$$9.31 \times 10^7 \mu\text{mol} \times \frac{\text{mol}}{10^6 \mu\text{mol}} = 93.1 \text{ mol}$$

(e) $3.96 \times 10^6 \text{ nm}$

$$3.96 \times 10^6 \text{ nm} \times \frac{\text{mm}}{10^6 \text{ nm}} = 3.96 \text{ mm}$$

Prospects and Applications for Plant-Associated Microbes, A laboratory manual Seppo Sorvari, Anna Maria Pirttilä, 2014-12-15 Research on the microbial colonization of the aerial and subterranean tissues of plants has shown an extensive scale of interactions between the hosts and a range of microbes including bacteria and fungi Intercellular spaces vascular systems and even single cells can be inhabited by these endophytic microbes Of the bacterial endophytes only a small percentage is harmful to the plant most are neutral opportunistic or beneficial These plant based bacteria can have various important functions throughout the life cycle of the plant some promote plant growth and development others protect the plant from diseases This ability to be able to protect plants from diseases has catalyzed numerous laboratories to search for new bacteria that could be utilized instead of the traditional plant protective agents Because two or more interacting organisms are involved research and the eventual application of suitable bio controlling microbes are challenging and often require specific skills and equipment The purpose of this book is to provide a comprehensive review for those who are interested in the research and biotechnological applications of plant associated bacteria It also provides a compilation of current work conducted on plant bacteria interactions **Plant Tissue Culture Manual - Supplement 7** K.

Lindsey, 2013-11-11 Plant tissue culture has a long history dating back to the work of Gottlieb Haberlandt and others at the end of the 19th century but the associated concepts and techniques have reached a level of usefulness and application which has never been greater The technical innovations have given new insights into fundamental aspects of plant differentiation and development and have paved the way to the identification of strategies for the genetic manipulation of plants It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience The themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology As was the case for the sister volume Plant Molecular Biology Manual the objective has been from the start to produce a manual which is at home on the laboratory bench The plastic covered ring bound format has proved to be most popular and is retained here Equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one's shoulder *Plant Cell, Tissue and Organ Culture* Oluf Gamborg, Gregory C. Phillips, 2013-06-29 This manual provides all relevant protocols for basic and applied plant cell and molecular technologies such as histology electron microscopy cytology virus diagnosis gene transfer and PCR Also included are chapters on laboratory facilities operation and management as well as a glossary and all the information needed to set up and carry out any of the procedures without having to use other resource books It is especially designed for professionals and advanced students who wish to acquire practical skills and first hand experience in plant biotechnology

Doubled Haploid Production in Crop Plants M. Maluszynski, Kenneth Kasha, B.P. Forster, I. Szarejko, 2013-06-29 The production of doubled haploids has become a necessary tool in advanced plant breeding institutes and commercial companies for breeding many crop species. However, the development of new more efficient and cheaper large scale production protocols has meant that doubled haploids are also recently being applied in less advanced breeding programmes. This Manual was prepared to stimulate the wider use of this technology for speeding and opening up new breeding possibilities for many crops including some woody tree species. Since the construction of genetic maps using molecular markers requires the development of segregating doubled haploid populations in numerous crop species, we hope that this Manual will also help molecular biologists in establishing such mapping populations. For many years both the Food and Agriculture Organization of the United Nations (FAO) and the International Atomic Energy Agency (IAEA) have supported and coordinated research that focuses on development of more efficient doubled haploid production methods and their applications in breeding of new varieties and basic research through their Plant Breeding and Genetics Section of the Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture. The first FAO/IAEA scientific network Coordinated Research Programme (CRP) dealing with doubled haploids was initiated by the Plant Breeding and Genetics Section in 1986.
