techniques to study the strong gravity region around these objects with electromagnetic radiation More importantly it
provides the basic tools for writing an astrophysical code and testing the Kerr paradigm Astrophysical black holes are an
ideal laboratory for testing strong gravity According to general relativity the spacetime geometry around these objects
should be well described by the Kerr solution The electromagnetic radiation emitted by the gas in the inner part of the
accretion disk can probe the metric of the strong gravity region and test the Kerr black hole hypothesis With exercises and
examples in each chapter as well as calculations and analytical details in the appendix the book is especially useful to the
beginners or graduate students who are familiar with general relativity while they do not have any background in astronomy
