While this latest edition has been updated with new content and included sample problems, it also retains its teach by example approach that emphasizes analytical procedures, computer implemented algorithms, and the most comprehensive support package available, including fully worked solutions, PPT lecture slides, and animations of selected topics. Highly illustrated and fully supported with downloadable MATLAB algorithms for project and practical work, this book provides all the tools needed to fully understand the subject. Provides a new chapter on the circular restricted 3 body problem including low energy trajectories. Presents the latest on interplanetary mission design including non Hohmann transfers and lunar missions. Includes new and revised examples and sample problems.

Aerodynamics for Engineering Students Steven H. Collicott, Daniel T. Valentine, E. L. Houghton, P. W. Carpenter, 2016-08-12 *Aerodynamics for Engineering Students* Seventh Edition is one of the world's leading course texts on aerodynamics. It provides concise explanations of basic concepts combined with an excellent introduction to aerodynamic theory. This updated edition has been revised with improved pedagogy and reorganized content to facilitate student learning and includes new or expanded coverage in several important areas such as hypersonic flow, UAVs, and computational fluid dynamics. Provides contemporary applications and examples that help students see the link between everyday physical examples of aerodynamics and the application of aerodynamic principles to aerodynamic design. Contains MATLAB based computational exercises throughout giving students practice in using industry standard computational tools. Includes examples in SI and Imperial units reflecting the fact that the aerospace industry uses both systems of units. Improved pedagogy including more examples and end of chapter problems and additional and updated MATLAB codes.

Aircraft Structures for Engineering Students T.H.G. Megson, 2016-10-17 *Aircraft Structures for Engineering Students* Sixth Edition is the leading self contained aircraft structures course text.
