**An Introduction to Ocean Remote Sensing** Seelye Martin,2004-08-26 A graduate level 2004 textbook describing the use of satellites to study oceanic physical and biological properties      **Introduction to the Modelling of Marine Ecosystems** W. Fennel,T. Neumann,2014-09-18 Introduction to the Modelling of Marine Ecosystems Second Edition provides foundational information on the construction of chemical and biological models from simple cases to more complex biogeochemical models and life cycle resolving model components This step by step approach to increasing the complexity of the models allows readers to explore the theoretical framework and become familiar with the models even when they have limited experience in mathematical modeling Introduction to the Modelling of Marine Ecosystems shows how biological model components can be integrated into three dimensional circulation models and how such models can be used for numerical experiments Covers the marine food web from nutrients phytoplankton to higher trophic levels Presents information on the response of marine systems to external pressures as seen in physical biological models Provides an extended discussion of unifying theoretical concepts and of physical biological interaction Covers higher trophic levels in particular multi species fish models and their interaction with the biogeochemical models Offers MATLAB scripts on a companion website for many of the described example models to facilitate reproduction of the findings in the book and guide reader to writing own code      *Introduction to Geophysical Fluid Dynamics* Benoit Cushman-Roisin,Jean-Marie Beckers,2011-08-26 Introduction to Geophysical Fluid Dynamics provides an introductory level exploration of geophysical fluid dynamics GFD the principles governing air and water flows on large terrestrial scales Physical principles are illustrated with the aid of the simplest existing models and the computer methods are shown in juxtaposition with the equations to which they apply It explores contemporary topics of climate dynamics and equatorial dynamics including the Greenhouse Effect global warming and the El Nino Southern Oscillation Combines both physical and numerical aspects of geophysical fluid dynamics into a single affordable volume Explores contemporary topics such as the Greenhouse Effect global warming and the El Nino Southern Oscillation Biographical and historical notes at the ends of chapters trace the intellectual development of the field Recipient of the 2010 Wernaers Prize awarded each year by the National Fund for Scientific Research of Belgium FNR FNRS      **Full Equations (FEQ) Model for the Solution of the Full, Dynamic Equations of Motion for One-dimensional Unsteady Flow in Open Channels and Through Control Structures** Delbert D.
