Finin,Steven Willmott,2006-03-30 There is a growing interest in the use of ontologies for multi agent system applications On the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable knowledge sharing and a growing number of applications have benefited from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on understanding the goals preferences and constraints posed by the user Autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to communicate depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms used to describe a domain and the semantics associated with them In addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based **A Hands-On Introduction to Machine Learning** Chirag Shah,2022-12-29 A self contained and practical introduction that assumes no prior knowledge of programming or machine learning **Challenges and Solutions in Internet of Things-Based Smart Applications** Narendra Shekhar,Subhash K. Shinde,Smita Sanjay Ambarkar,Antonis Michalas,Monika Mangla,Achamma Thomas,2025-01-06 Presenting innovative research oriented ideas and the implementation and socioeconomic applications of internet of things based network Challenges and Solutions in Internet of Things Based Smart Applications showcases smart waste management optical technologies for internet of things and remote patient monitoring and data analysis Presents
