Ortigao,Alberto Sayao,2013-03-09 This book is aimed at the practising engineer and engineering geologist working in tropical environments where lands lides are mainly triggered by rain fall This book is based on a similar work published in 1999 in Portuguese which became the Rio de Janeiro Slope Manual This book is an engineering guide for the design of slopes and stabilisation works in rocks and residual soils It evolves from the cumulative experience gathered by several engineers and geologists who faced severe slope problems The authors experience throughout Central and South America Costa Rica Argentina Bolivia Peru Ecuador and Venezuela and the Far East especially Hong Kong and Malaysia was used as a foundation for writing this book The work also benefits enormously from the time spent in Hong Kong in 1996 and 1997 by the first editor on sabbatical at the City University of Hong Kong and the discussions he had with many colleagues from the Geotechnical Engineering Office GEO of the Hong Kong Government especially Dr A Malone Mr w K Pun Dr A Li Mr K Ho and Mr y c Chan among others Quartz Cementation in Sandstones R. Worden,Sadoon Morad,2009-09-18 Quartz is the major porosity reducing cement in many sandstonesequences Therefore Quartz cements represent a key source ofpetrographic and geochemical information about diagenetic history They are also the major determinant of sandstone reservoirquality While the ultimate goal of research in this area is to makerobust predictions about the amount and distribution of quartzcements in a wide variety of depositional and burial settings there are nevertheless large areas of the

subject that are poorly understood and remain the subject of controversy The aim of this Volume which is based partly on papers submitted to a 1996 workshop in Belfast and partly on invited contributions is to bring together some of the main strands of research into quartz cements and provide a focus for debate and direction for future research This book will be welcomed by sedimentologists petrographers and geochemists involved in sandstone diagenesis as well as by petroleum geologists seeking a deeper understanding of the factors influencing reservoir porosity and permeability Contributors from 11 countries and 4 continents Represents the benchmark in quartz cement research If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP29>
