The Grasp of Consciousness (Psychology Revivals) Jean Piaget, 2015-10-05

Originally published in English in 1976 the book draws on and extends our knowledge of the process of learning The subject of the study is the general stage in a child's development that comes between his successful performance of an activity without knowing how he did it that is what he had to do in order to succeed and the times when he becomes aware of what went into that action The book reports the results of experiments conducted at the Centre of Genetic Epistemology Children ranging in age between four and adolescence were asked to perform such tasks as walking on all fours playing tiddlywinks building a ramp for a toy car They were then asked to explain how they had performed the task and in some cases to instruct the interviewer Their answers show a number of surprising inaccuracies in the child's ability to grasp the nature of what he has done Taking a broad view of his results Piaget shows that they reveal several stages in the gradual development of the child's conceptualization of his actions In analysing each stage Piaget argues that the child's concept of his own action cannot be considered a simple matter of enlightenment but must actively be reconstructed from his experience This view has always been at the core of Piaget's work and a new area of the child's mental world is here given definitive treatment

Epistemology and Psychology of Functions J. Piaget, J.B. Grize, A. Szeminska, V. Bang, 2012-12-06 Years ago prompted by Grize Apostel and Papert we undertook the study of functions but until now we did not properly understand the relations between functions and operations and their increasing interactions at the level of constituted functions By contrast certain recent studies on constitutive functions or preoperatory functional schemes have convinced us of the existence of a sort of logic of functions springing from the schemes of actions which is prior to the logic of operations drawn from the general and reversible coordinations between actions This preoperatory logic accounts for the very general and until now unexplained primacy of order relations between 4 and 7 years of age which is natural since functions are ordered dependences and result from oriented applications And while this logic ends up in a positive manner in formalizable structures it has gaps or limitations Psychologically we are interested in understanding the systematic errors due to this primacy of order such as the undifferentiation of longer and farther or the non conservations caused by ordinal estimations of levels etc as opposed to extensive or metric evaluations In a sense which is psychologically very real this preoperatory logic of constitutive functions represents only the first half of operatory logic if this can be said and it is reversibility which allows the construction of the other half by completing the initial one way structures
