The Carbon Age Eric Roston, 2010-08-09 What do bubbles in a soft drink a bullet proof vest a plastic chair and our DNA have in common Carbon It is and forever has been the ubiquitous architect of life and civilization forming the chemical backbone of every living creature And yet when we hear the word today it is more often than not in a crisis situation carbon dioxide emissions are destroying the ozone layer and warming the planet the volatile Middle East explodes atop its stores of hydrocarbons carbohydrates threaten obesity and diabetics Carbon thus sustains us and threatens us in equal measure Eric Roston illuminates this essential element in all its forms cleverly recreating the intricate carbon cycle on the page by tracing its journey from the Big Bang to Earth and its extraordinary infiltration of this planet and in time influence on humankind and civilization Evoking its ubiquity more than 99% of all 31 million known substances contain carbon Roston chronicles the ways we have used it often to surprising and sometimes to catastrophic effect having sped up the carbon cycle in the last two centuries we are now attempting to wrestle Earth's geochemical cycle back from the brink Blending the latest science with original reporting Roston makes us aware as never before of the seminal impact carbon has and has had on our lives **The Carbon Cycle** Bray Jacobson, 2020 **The Ocean Carbon Cycle and Climate** Mick Follows, Temel Oguz, 2004-08-03 Our desire to understand the global carbon cycle and its link to the climate system represents a huge challenge These overarching questions have driven a great deal of scientific endeavour in recent years What are the basic oceanic mechanisms which control the oceanic carbon reservoirs and the partitioning of carbon between ocean and atmosphere How do these mechanisms depend on the state of the climate system and how does the carbon cycle feed back on climate What is the current rate at which fossil fuel carbon dioxide is absorbed by the oceans and how might this change in the future To begin to answer these questions we must first understand the distribution of carbon in the ocean its partitioning between different ocean reservoirs the solubility and biological pumps of carbon the mechanisms controlling these reservoirs and the relationship of the significant physical and biological processes to the physical environment The recent surveys from the JGOFS and WOCE Joint Global Ocean Flux Study and World Ocean Circulation Experiment programs have given us a first truly global survey of the physical and biogeochemical properties of the ocean These new high quality data provide the opportunity to better quantify the present oceans reservoirs of carbon and the changes due to fossil fuel burning In addition diverse process studies and time series observations have clearly revealed the complexity of interactions between nutrient cycles ecosystems the carbon cycle and the physical environment *The Global Carbon Cycle* Christopher B. Field, Michael R. Raupach, 2012-09-26 While a number of gases are implicated in global warming carbon dioxide is the most important contributor and in one sense the entire phenomena can be seen as a human induced perturbation of the carbon cycle The Global Carbon Cycle offers a scientific assessment of the state of current knowledge of the carbon cycle by the world's leading scientists sponsored by SCOPE and the Global Carbon Project and other international partners It gives an

introductory overview of the carbon cycle with multidisciplinary contributions covering biological physical and social science aspects Included are 29 chapters covering topics including an assessment of carbon climate human interactions a portfolio of carbon management options spatial and temporal distribution of sources and sinks of carbon dioxide socio economic driving forces of emissions scenarios Throughout contributors emphasize that all parts of the carbon cycle are interrelated and only by developing a framework that considers the full set of feedbacks will we be able to achieve a thorough understanding and develop effective management strategies The Global Carbon Cycle edited by Christopher B Field and Michael R Raupach is part of the Rapid Assessment Publication series produced by the Scientific Committee on Problems of the Environment SCOPE in an effort to quickly disseminate the collective knowledge of the world's leading experts on topics of pressing environmental concern

The Global Carbon Cycle and the Evolution of Photosynthesis Alexander A. Ivlev, 2019-11-05 The book deals with the problem of the interaction and interconditionality of the various processes occurring in both the Earth's crust and the biosphere It proposes a model of the global carbon cycle explaining the nature and mechanism of these interactions showing that the key element of this interaction is the photosynthesis controlled by periodic carbon dioxide injections caused by collision zones of lithospheric plates Changes in the environment due to the evolution of photosynthesis cause alterations in the carbon cycle and lead to a stationary state when new features of the cycle are manifested The main instruments of the analysis here are the isotopic technique and physico chemical modeling conducted on the basis of the principle of actualism The model provides explanations of periodic mass extinctions of organisms the explosions of life the uneven distribution of organic matter in the sedimentary strata stratigraphic oil distribution and various other events in the biosphere in the course of geological history The book will appeal to geologists geochemists climatologists ecologists biologists and specialists in global change

The Carbon Cycle Suzanne Slade, 2007 Describes the jobs performed by carbon compounds and discusses the steps in its cycle throughout nature including air plants and animals

The Global Carbon Cycle Martin Heimann, 2013-06-29 This book is the outcome of a NAAIL Advanced Study Institute on the contemporary global carbon cycle held in Cortina d'Ampezzo Italy September 8-20 1991 The motivation for this ASI originated from recent controversial findings regarding the relative roles of the ocean and the land biota in the current global balance of atmospheric carbon dioxide Consequently the purpose of this institute was to review among leading experts in the field the multitude of known constraints on the present day global carbon cycle as identified by the fields of meteorology physical and biological oceanography geology and terrestrial biosphere sciences At the same time the form of an Advanced Study Institute was chosen thus providing the opportunity to convey the information in tutorial form across disciplines and to young researchers entering the field The first three sections of this book contain the lectures held in Cortina The first section

reviews the atmospheric large scale global constraints on the present day carbon cycle including the emissions of carbon dioxide from fossil fuel use and it provides a brief look into the past The second section discusses the role of the terrestrial biosphere and the third the role of the ocean in the contemporary global carbon cycle **Nature's Great Carbon Cycle**

Lorus Johnson Milne, Margery Milne, 1983 Discusses the global cycling of carbon in living things the addition of new carbon to the world's supply and radiocarbon dating of organic matter in fossils *The Changing Carbon Cycle* John R.

Trabalka, David E. Reichle, 2013-03-09 The United States Government cognizant of its responsibilities to future generations has been sponsoring research for nine years into the causes effects and potential impacts of increased concentrations of carbon dioxide CO₂ in the atmosphere Agencies such as the National Science Foundation National Oceanic and Atmospheric Administration and the U.S. Department of Energy DOE cooperatively spent about 100 million from FY 1978 through FY 1984 directly on the study of CO₂ The DOE as the 2nd lead government agency for coordinating the government's research efforts has been responsible for about 60% of these research efforts William James succinctly defined our purpose when he stated science must be based upon irreducible and stubborn facts Scientific knowledge can and will reduce the present significant uncertainty surrounding our understanding of the causes effects and potential impacts of increasing atmospheric CO₂ We have come far during the past seven years in resolving some underlying doubts and in narrowing the ranges of disagreement Basic concepts have become less murky Yet much more must be accomplished more irreducible and stubborn facts are needed to reduce the uncertainties so that we can improve our knowledge base Uncertainty can never be reduced to zero However with a much improved knowledge base we will be able to learn understand and be in a position to make decisions

Human Interactions with the Carbon Cycle National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, Paul C. Stern, 2002-04-29 The USGCRP's Carbon Cycle Working Group asked the National Research Council's Committee on the Human Dimensions of Global Change to hold a workshop on Human Interactions with the Carbon Cycle The basic purpose of the workshop was to help build bridges between the research communities in the social sciences and the natural sciences that might eventually work together to produce the needed understanding of the carbon cycle an understanding that can inform public decisions that could among other things prevent disasters from resulting from the ways humanity has been altering the carbon cycle Members of the working group hoped that a successful workshop would improve communication between the relevant research communities in the natural and social sciences leading eventually to an expansion of the carbon cycle program element in directions that would better integrate the two domains *Carbon Cycle Research Plan* Roger C. Dahlman, 1984 Carbon in the Geobiosphere Fred T. Mackenzie, Abraham Lerman, 2006-12-29 The book covers the fundamentals of the biogeochemical behavior of carbon near the Earth's surface It is mainly a reference text for Earth and environmental scientists It presents an overview of the origins and behavior of the carbon cycle and atmospheric carbon dioxide and the human effects on them The

book can also be used for a one semester course at an intermediate to advanced level addressing the behavior of the carbon and related cycles *The Carbon Cycle* Kate Rawles,2016 *Carbon Cycles and Climate* Jerry S. Olson,Linda J. Allison,Bobbie-Neal Collier,1980 This partially annotated bibliography contains the first 1000 references from a computerized file of literature on the global ecological implications of carbon cycles and climatic changes Many early citations originated from the Biogeochemical Ecological Information Center established at Oak Ridge National Laboratory in 1968 and from profiles of computerized files such as Government Research Abstracts GRA and Biological Abstracts BA Later citations have been extracted from the open literature through 1978 and early 1979 from government reports and impact statements and from profiles of GRA BA and the Energy Data Base of the Department of Energy Technical Information Center Oak Ridge Tennessee The subject categories covered by this bibliography may be divided into two main topics carbon cycling and climate system analysis Volume I contains an introduction and overview Volume 2 contains an alphabetical by author listing of citations Volume 3 provides indexes for author organization corporate authority keywords or free index terms taxonomic category subject category Chemical Abstracts codes Biological Abstracts codes crosscode and COSATI Weekly Government Abstracts codes concentrated with permuted title words *Carbon-oxygen and Nitrogen Cycles* Rebecca Harman,2005 Using an enquiry approach this series explores earth science topics enabling students to learn about the natural processes and cycles that make the earth the way it is today Various geological hydrological chemical and meteorological processes are explained including their causes and the consequences **United States Carbon Cycle Science Plan** Anna M. Michalak,Rob Jackson,Gregg Marland,Christopher L. Sabine,Carbon Cycle Science Working Group (U.S.),University Corporation for Atmospheric Research,2011 **The Phanerozoic Carbon Cycle** Robert A. Berner,2004-08-19 The term carbon cycle is normally thought to mean those processes that govern the present day transfer of carbon between life the atmosphere and the oceans This book describes another carbon cycle one which operates over millions of years and involves the transfer of carbon between rocks and the combination of life the atmosphere and the oceans The weathering of silicate and carbonate rocks and ancient sedimentary organic matter including recent large scale human induced burning of fossil fuels the burial of organic matter and carbonate minerals in sediments and volcanic degassing of carbon dioxide contribute to this cycle In *The Phanerozoic Carbon Cycle* Robert Berner shows how carbon cycle models can be used to calculate levels of atmospheric CO₂ and O₂ over Phanerozoic time the past 550 million years and how results compare with independent methods His analysis has implications for such disparate subjects as the evolution of land plants the presence of giant ancient insects the role of tectonics in paleoclimate and the current debate over global warming and greenhouse gases **A U.S. Carbon Cycle Science Plan** Carbon and Climate Working Group (U.S.),1999
