**Inverse Problems and Inverse Scattering of Plane Waves** D.N. Roy, L. S. Couchman, 2001-10-04 The purpose of this text is to present the theory and mathematics of inverse scattering in a simple way to the many researchers and professionals who use it in their everyday research While applications range across a broad spectrum of disciplines examples in this text will focus primarily but not exclusively on acoustics The text will be especially valuable for those applied workers who would like to delve more deeply into the fundamentally mathematical character of the subject matter Practitioners in this field comprise applied physicists engineers and technologists whereas the theory is almost entirely in the domain of abstract mathematics This gulf between the two if bridged can only lead to improvement in the level of scholarship in this highly important discipline This is the book's primary focus      Foundations of Probabilistic Logic Programming Fabrizio

Riguzzi, 2022-09-01 Probabilistic Logic Programming extends Logic Programming by enabling the representation of uncertain information by means of probability theory Probabilistic Logic Programming is at the intersection of two wider research fields the integration of logic and probability and Probabilistic Programming Logic enables the representation of complex relations among entities while probability theory is useful for model uncertainty over attributes and relations Combining the two is a very active field of study Probabilistic Programming extends programming languages with probabilistic primitives that can be used to write complex probabilistic models Algorithms for the inference and learning tasks are then provided automatically by the system Probabilistic Logic programming is at the same time a logic language with its knowledge representation capabilities and a Turing complete language with its computation capabilities thus providing the best of both worlds Since its birth the field of Probabilistic Logic Programming has seen a steady increase of activity with many proposals for languages and algorithms for inference and learning Foundations of Probabilistic Logic Programming aims at providing an overview of the field with a special emphasis on languages under the Distribution Semantics one of the most influential approaches The book presents the main ideas for semantics inference and learning and highlights connections between the methods Many examples of the book include a link to a page of the web application <http://cplint.eu> where the code can be run online      **The Wireless World and Radio Review**, 1926      **Languages and Compilers for Parallel Computing** Guang

R. Gao, Lori Pollock, John Cavazos, Xiaoming Li, 2010-06-10

It is our pleasure to present the papers accepted for the 22nd International Workshop on Languages and Compilers for Parallel Computing held during October 8-10, 2009 in Newark, Delaware, USA Since 1986 LCPC has become a valuable venue for researchers to report on work in the general area of parallel computing, high performance computer architecture and compilers LCPC 2009 continued this tradition and in particular extended the area of interest to new parallel computing accelerators such as the IBM Cell Processor and Graphic Processing Unit (GPU). This year we received 52 submissions from 15 countries. Each submission received at least three reviews and most had four. The PC also sought additional

external reviews for contentious papers. The PC held an all-day phone conference on August 24 to discuss the papers. PC members who had a conflict of interest were asked to leave the call temporarily when the corresponding papers were discussed. From the 52 submissions, the PC selected 25 full papers and 5 short papers to be included in the workshop proceedings, representing a 58% acceptance rate. We were fortunate to have three keynote speeches, a panel discussion, and a tutorial in this year's workshop. First, Thomas Sterling, Professor of Computer Science at Louisiana State University, gave a keynote talk titled "HPC in Phase Change: Towards a New Parallel Execution Model." Sterling argued that a new multi-dimensional research thrust was required to realize the design goals with regard to power, complexity, clock rate, and reliability in the new parallel computer systems. ParalleX, an exploratory execution model developed by Sterling's group, was introduced to guide the co-design of new architectures, programming methods, and system software.

Monte Carlo Methods in Quantum Problems M.H. Kalos,2012-12-06 Monte Carlo methods have been a tool of theoretical and computational scientists for many years In particular the invention and percolation of the algorithm of Metropolis Rosenbluth Rosenbluth Teller and Teller sparked a rapid growth of applications to classical statistical mechanics Although proposals for treatment of quantum systems had been made even earlier only a few serious calculations had been carried out Such calculations are generally more consuming of computer resources than for classical systems and no universal algorithm had or indeed has yet emerged However with advances in techniques and in sheer computing power Monte Carlo methods have been used with considerable success in treating quantum fluids and crystals simple models of nuclear matter and few body nuclei Research at several institutions suggest that they may offer a new approach to quantum chemistry one that is independent of basis and yet capable of chemical accuracy That Monte Carlo methods can attain the very great precision needed is itself a remarkable achievement More recently new interest in such methods has arisen in two new areas Particle theorists in particular K Wilson have drawn attention to the rich analogy between quantum field theory and statistical mechanics and to the merits of Monte Carlo calculations for lattice gauge theories This has become a rapidly growing sub field A related development is associated with lattice problems in quantum physics particularly with models of solid state systems There is much ferment in the calculation of various one dimensional problems such as the Hubbard model
