*Between the World and the Urban Classroom* George Sirrakos Jr., Christopher Emdin, 2017-05-12 Borrowing from the ideas of John Dewey schools and classrooms are a reflection of the world therefore in order to make sense of the urban classroom we need to make sense of the world In this book the editors have compiled a collection of nine critical essays or chapters each examining a particular contemporary national and or international event The essays each undertake an explicit approach to naming oppression and addressing it in the context of urban schooling Each essay has a two fold purpose The first purpose is to help readers see the world unveiled through a more critical lens and to problematize long held beliefs about urban classrooms with regard to race gender social class equity and access Second as each author draws parallels between an event and urban classrooms a better understanding of the microstructures that exist in urban classrooms emerges At a time of serious political economic and social uncertainty we need a book like this one that showcases how the world can be seen as a critical site of curriculum and pedagogy A powerful intersectional analysis of the world word and urban sociopolitical

context authors in this book push the boundaries of what educators know and do in urban schools and classrooms Grounded in frameworks of critical race theory and culturally relevant pedagogy authors center essential societal moments that must be viewed as the real curriculum These moments can equip students with tools to examine the what of the world as well as how to examine critique challenge and disrupt individual systemic and structural realities and practices that perpetuate and maintain a racist sexist homophobic and xenophobic status quo This is an important forward thinking innovative book a welcome addition to the field of urban education H Richard Milner IV Helen Faison Chair of Urban Education University of Pittsburgh

The Primacy of PISA Joseph M. Piro,2019-08-21 Every three years the world awaits the results of the Programme for International Student Assessment or PISA the rankings of school systems overseen by the Organisation for Economic Co operation and Development OECD Nations around the world look eagerly and apprehensively to see where their students rank on these tests of competence in mainly science math and reading This book provides a window into PISA and its power

What exactly is PISA How are its tests developed Who takes the test What countries tend to outperform and which underperform What do countries learn from PISA Why is PISA both revered and feared And most importantly does PISA improve education globally The first PISA in 2000 included 32 countries In 2018 nearly eighty nations took part in PISA That number is expected to double by 2030 This may mean that students in over 80% of the world's countries will take the PISA exams This scenario has made PISA more important than ever This book probes topics and themes related to the world's most important exam and why many view a high PISA ranking rightly or wrongly as global education's seal of approval Because of this PISA has been called a disruptor a test which can trigger major reform in school systems around the world But is it the PISA rankings that are the real disruptor or the decisions countries make because of their rankings These decisions often involve systemic changes in teaching and learning which can substantially alter how a country measures and prioritizes its education system

Developing Enterprise Chatbots Boris Galitsky, 2019-04-04 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies Today there are two popular paradigms for chatbot construction

- 1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data
- 2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat

Although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning The foci of this book are applications

of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches Supplementary material and code is available at <https://github.com/bgalitsky> relevance based on parse trees
