World Resources Institute Report 1996

G.H. Peters, Joachim von Braun

World Resources Institute Report 1996:

The World's Water 1998-1999, The quality and availability of fresh water is of critical importance to human and ecosystem health. The World's Water 1998-1999 is a comprehensive reference on worldwide freshwater resources and the political, economic, scientific, and technological issues associated with them. It provides both detailed analysis of the most significant trends and events and the most up-to-date data available on water resources and their use. Chapters examine access to basic water requirements for drinking and sanitation, hydropower and dam construction, water law, water and conflict, water and global climate change, international water institutions and activities. The book features more than fifty charts, tables, and maps that present the most current data on a range of factors including the availability and use of water, numbers of threatened and endangered aquatic species, dam and desalination capacity, worldwide trends in several devastating water-borne diseases, changes by region in global precipitation patterns since 1900, and much more. To be published on a biennial basis, The World's Water will be an essential reference for water resources specialists with both government agencies and nongovernmental organizations, resource economists, planners, public policy and public administration experts, environmental lawyers, students, and anyone concerned with water issues. **World Resources**

2000-2001 C. Rosen, 2000-11-29 World Resources 2000-2001 People and Ecosystems. The Fraying Web of Life focuses on the critical link between ecosystems and people and provides an overview of current global environmental and economic trends using hundreds of indicators in more than 150 countries. Until now, there has not been a comprehensive formalised process to assess human damage to our ecosystems, to establish a baseline for future actions, or to disseminate information that would aid the formulation of better policies world-wide. This book is the first reliable comprehensive base of evidence for taking stock and taking care of the world's diverse ecosystems. It deals with the critical issues that focus on the link between ecosystems and people, highlights the goods and services that ecosystems provide, and illustrates the benefits of a better understanding and better management of the planet's natural wealth. Reports on pilot studies by leading scientists and international institutions assessing the state of the world's ecosystems: forests, croplands, grasslands, freshwater systems, and coastal areas. Increases the understanding of human dependence on nature, raises awareness of environmental threats, provides examples of wise stewardship from all corners of the globe, focuses on four main issues: population and human well-being, food and water security, consumption, energy, and wastes, trace emissions since the Kyoto protocol, gives data tables for more than 150 countries. It demonstrates the power of information and new digital technologies to transform the way we interact with our environment and is particularly important for environmentalists, scientists, professionals, journalists, policy makers, and students. This special Millennium Edition of the World Resources Institute's biennial report published by Elsevier Science in September 2000 in partnership with the World Resources Institute, the UN Environment Program, the UN Development Programme, and the World Bank. NEW FROM APRIL 2001 <http://www.enviromod subnet.dk> Ecological and

Environmental Modeling An Interactive Internet Course World Resources 1998-99 World Resources Institute,1998 This is the 8th edition in a series which provides an authoritative assessment of the world's natural resource base This edition focuses on the relationship between environmental change and human health Drawing on the latest scientific data it explores how environmental conditions contribute to death and disease around the world and how that may change in the coming decades

Economics and the Global Environment Charles S. Pearson,2000-10-09 Economics and the Global Environment is a path breaking comprehensive analysis of how economic and environmental systems mesh in the international context The book investigates if and how environmental resources such as global climate genetic diversity and transboundary pollution can be managed in an international system of sovereign states without a Global Environment Protection Agency It also considers traditional international economics theory and policy and explores how they can be expanded to accommodate environmental values Until recently trade theory and trade policy neglected pollution and environmental degradation This situation has changed dramatically and the controversial and corrosive issues of trade and the environment are here given careful analysis These topics are enriched by a concise presentation of the principles of environmental economics and a thoughtful treatment of sustainable development The book will appeal to students and practitioners of trade and development as well as the environmental community

World in Transition Wissenschaftlicher Beirat der Bundesregierung Globale Umweltveränderungen (Germany),2001 Comprehensive assessment from the leading German environmental scientists of the state of the world's living resources or biosphere Covers all aspects of the subject biodiversity and genetic diversity landscape and ecosystems its role in the Earth's system and human impacts on it Reviews global policies and research strategies on the biosphere and advocates urgent policy actions A major authoritative contribution to environmental science and policy Biodiversity the planet's natural capital is undergoing a dramatic collapse its Sixth Extinction The losses which are due to human activities and overexploitation of the biosphere are irreversible They are undermining the basis of future well being and prosperity including genetic resources and food production climate stability and coastal and soil protection The scientists of the German Advisory Council on Global Change have produced an authoritative and alarming analysis of the state of the biosphere They show that the time remaining for remedial action is fast disappearing and they set out a range of initiatives to be undertaken at different levels Among their main urgent recommendations are protecting 10-20% of the global land area an Intergovernmental Panel on Biodiversity to provide scientific advice conservation of the diversity of cultivated as well as wild plant species greater multilateral cooperation and implementation of the Convention on Biological Diversity The volume makes a highly significant contribution to the scientific and policy debates on these critical issues It will be essential reading for those engaged with them
