World Telecommunication Ict Development Report 2006:

World Development Report 2008 World Bank, 2007-10-15 The world's demand for food is expected to double within the next 50 years while the natural resources that sustain agriculture will become increasingly scarce degraded and vulnerable to the effects of climate change In many poor countries agriculture accounts for at least 40 percent of GDP and 80 percent of employment At the same time about 70 percent of the world's poor live in rural areas and most depend on agriculture for their livelihoods World Development Report 2008 seeks to assess where when and how agriculture can be an effective instrument for economic development especially development that favors the poor It examines several broad questions How has agriculture changed in developing countries in the past 20 years What are the important new challenges and opportunities for agriculture Which new sources of agricultural growth can be captured cost effectively in particular in poor countries with large agricultural sectors as in Africa How can agricultural growth be made more effective for poverty reduction How can governments facilitate the transition of large populations out of agriculture without simply transferring the burden of rural poverty to urban areas How can the natural resource endowment for agriculture be protected How can agriculture's negative environmental effects be contained This year's report marks the 30th year the World Bank has been publishing the World Development Report

World Sustainable Development Outlook 2007 Allam Ahmed, 2017-09-29 The World Sustainable Development Outlook series has been developed to provide an overview of sustainable development to discuss why it is important and to provoke forward thinking on the development of a more coherent approach to solving global problems related to sustainability through science and technology In doing so a holistic approach is used to critically examine the interrelationship between the natural governmental economic and social dimensions of our world and how science and technology can contribute to solutions This is a truly global source book which is reflected in the varied national and cultural origins of the contributors as well as the topics and case studies covered Each year a different theme will be covered The theme of World Sustainable Development Outlook 2007 is the different dimensions of knowledge and technology management in the new era of information revolution and how they relate to sustainable development Rapid innovation in information and communication technologies ICTs is clearly reshaping the world we live in Countries are increasingly judged by whether they are information rich or information poor It is estimated that 30-40% of the world's economic growth and 40-50% of all new jobs will be IT driven Education and knowledge are the chief currencies of the modern age and can also be a strategic resource and a lifeline for sustainable development Yet in Africa millions of people have never made a telephone call The technological gulf between developed and developing countries DCs is likely to widen further with the rapid expansion of the internet and the speedy transition to digitalisation in the West The impacts on DCs may include an increase in the so called brain drain and growing dependence on foreign aid of a different kind knowledge aid There are fears that knowledge imperialism is already with us What is clear is that most of the technological innovations in ICTs are Western

designed and fail to address the needs of the most disadvantaged. The interest of industrialised countries in the use of ICTs in DCs has largely been more concerned with the profitability of their own business enterprises than with any broader goals concerning the development of the host countries. DCs face the challenge of either becoming an integral part of the knowledge based global economy or the very real danger of finding themselves on the wrong side of the digital divide. Successful management in the new millennium requires developing new methods and approaches to meet the challenges and opportunities of this information revolution while at the same time fostering sustainable development. Adopting a holistic approach, this book aims to critically examine the interrelationship between these different issues in order to reach solutions and a consensus for a better future, taking into account a variety of international institutional and intellectual perspectives. It uses case and country studies in technological innovation and experience so that lessons in effective management of ICTs can be learned from successful initiatives, ideas and innovations.

Proceedings of IAC-EIaT 2014 collective of authors, 2014-12-02. Conference proceedings International Academic Conference on Engineering Internet and Technology in Prague 2014. IAC EIaT 2014 in Prague. Friday Saturday December 12-13 2014.

Digital Interactions in Developing Countries Jeffrey James, 2013. Jeffrey James is one of the relatively few academics to have systematically taken on the topic of IT and development. In this timely book, he undertakes a methodological critique of prominent topics in the debate. Challenging the existing literature by international and governmental institutions, the book looks not only at the digital divide but also at issues such as digital preparedness, leapfrogging, and low cost computers. James also raises important issues which have been largely neglected in the literature, such as the implications for poverty in developing countries and the macroeconomics of mobile phones. The book argues that benefits from IT are captured in a different form in developing as opposed to developed countries. In the latter, gains come from technology ownership and use, whereas in the former, benefits cannot be captured as much in this way because ownership is more limited. Interestingly, the author shows that developing countries have responded to this distinction with a series of local innovations which are often low cost and pro-poor. This finding contradicts the widely held view that poor countries are unable to generate major innovations within their own borders. Accessible and clearly written, this book will be of great interest to scholars of development economics and development studies and is relevant to both policy makers and academics.
