than providing concrete examples of audiovisual integrations the main contributions of the design oriented studies are provided in their evaluation results in the form of design recommendations These include the use of redundant mappings for multi dimensional data analysis and considering subjective differences of domain experts for situational awareness support in air traffic control The design oriented studies also compared sonification designs where one study showed a potential trade off of using informative or pleasant designs for astronomy science communication Another comparison showed that concrete sonification designs can complement abstract visualizations Lastly the thesis provides design considerations by comparing the level of redundancy indexicality and complexity of each sonification design through the developed conceptual framework Overall this thesis offers motivated recommendations for the integration of sonification and visualization
