

Using the Sensorwatch Feature

The Sensorwatch feature provides a graphical presentation of the amplitude of the signal received from the sensor. It can be used to determine the best sensor site and application.

Figure 3-3: SpO₂ Sensorwatch bar on the 91387-38 central monitor

Figure 3-4: SpO₂ Sensorwatch symbol on the 96281-C telemetry transmitter.

Changes in the bar's shaded level signify changes in the patient's perfusion or changes in the application of the sensor. The horizontal line in the bottom fourth of the bar is used in Spacelabs Healthcare SpO₂ technology only and represents the minimum signal level that results in accurate saturation values.

When the shading is just below this line, the message **LOW SIGNAL STRENGTH - Reposition or replace sensor** appears.

- Reposition the sensor to a different site to provide better perfusion.
- Reposition the sensor to provide better contact with the skin. Make sure the LEDs and photo detector are properly aligned.
- Replace a defective sensor.
- Wait for the patient to warm up and for the patient's perfusion to increase.
